

This Evidence-to-Decision (EtD) framework addresses **pembrolizumab + chemotherapy** for **adult head and neck squamous cell carcinoma with $\geq 1\%$ PD-L1 expression**.

QUESTION

Should immune checkpoint inhibitors vs. alternative regimens be used for adult head and neck squamous cell carcinoma?	
POPULATION:	adult head and neck squamous cell carcinoma (HNSCC) with $\geq 1\%$ PD-L1 expression
INTERVENTION:	immune checkpoint inhibitors (ICIs)
COMPARISON:	alternative regimens
MAIN OUTCOMES:	overall survival; progression-free survival; health-related quality of life; adverse events (CTCAE ≥ 3)
SETTING:	treatment in the palliative 1st line setting
BACKGROUND:	application includes one ICI treatment for HNSCC: <ul style="list-style-type: none">pembrolizumab + chemotherapy (ESMO-MCBS non-curative score = 4)

SUMMARY OF JUDGEMENTS

	JUDGEMENT						
PROBLEM	No	Probably no	Probably yes	Yes		Varies	Don't know
DESIRABLE EFFECTS	Trivial	Small	Moderate	Large		Varies	Don't know

ASSESSMENT

Problem

Is the problem a priority?

JUDGEMENT	RESEARCH EVIDENCE
<ul style="list-style-type: none"> ○ No ○ Probably no ○ Probably yes ○ Yes ○ Varies ○ Don't know 	<p>An application addressing ICLs for the treatment of 12 adult cancer entities in the palliative 1st line setting has been submitted for consideration by the Expert Committee. This Evidence-to-Decision framework focuses on HNSCC, for which pembrolizumab + chemotherapy is proposed.</p> <p>The global incidence of HNSCC was estimated at 931,931 cases in 2020 and represents an important contributor to global cancer-associated morbidity and death (estimated 380,000 deaths per year) (1, 2). Approximately half of HNSCC patients will have recurrent disease; for which, the standard of care includes platinum-based chemotherapy. This regimen has limited benefit for overall survival and is associated with a reduced quality of life in treated patients because of its cytotoxic effects.</p>

Desirable Effects

How substantial are the desirable anticipated effects?

JUDGEMENT	RESEARCH EVIDENCE																		
<div>○ Trivial or no</div> <div>○ Small</div> <div>○ Moderate</div> <div>○ Large</div> <div>○ Varies</div> <div>○ Don't know</div>	The application presents a randomized trial as evidence for the desirable effects of pembrolizumab + chemotherapy in HNSCC (3).

<p>*The risk in the intervention group (and its 95% confidence interval) is based on the assumed risk in the comparison group and the relative effect of the intervention (and its 95% CI).</p> <p>CI: confidence interval; HR: hazard ratio; MD: mean difference; RR: risk ratio</p>						
<p>GRADE Working Group grades of evidence</p> <p>High certainty: we are very confident that the true effect lies close to that of the estimate of the effect.</p> <p>Moderate certainty: we are moderately confident in the effect estimate: the true effect is likely to be close to the estimate of the effect, but there is a possibility that it is substantially different.</p> <p>Low certainty: our confidence in the effect estimate is limited: the true effect may be substantially different from the estimate of the effect.</p> <p>Very low certainty: we have very little confidence in the effect estimate: the true effect is likely to be substantially different from the estimate of effect.</p>						
<p>Explanations</p> <p>a. Baseline risk derived from control arm of Keynote-048</p> <p>b. Downgraded for indirectness; 25.2% of participants, receiving the control treatment subsequently received ICIs upon progression which might have led to an underestimation of the effect</p> <p>c. Downgraded by 2 levels for very serious imprecision. The 95% CI crosses both the line of appreciable benefit and null-effect</p> <p>d. Downgraded due to open-label trial design and risk of performance and detection bias</p> <p>In the randomized trial, the median time from random assignment to data cutoff was 45.0 months (IQR, 41.0 to 49.2) (3). The survival benefit for pembrolizumab-containing treatments (HR 0.64, 95% CI 0.53 to 0.78) was maintained after approximately 4 years of follow-up. Study authors noted survival plateaus at approximately 4 years and 20% in patients receiving pembrolizumab-containing treatments; however, the number of patients at risk in the tails of the survival curves was very low (<10 patients at 50 months). Therefore, a judgement was made that a tail effect could potentially be ruled out.</p> <p>Further, treatment for advanced disease is multimodal (i.e., surgery, radiotherapy, and chemotherapy) and patients often have worse performance status outside of clinical trials (i.e., Eastern Cooperative Oncology Group (ECOG) 2/3). In these patients, the addition of pembrolizumab to standard of care is likely to be associated with less pronounced improvements in overall survival than those observed in the Keynote-048 trial.</p>						
Magnitude of effect judgements:						
Domain		Judgement per critical outcome		Judgement across desirable critical outcomes		
ICIs		Overall survival	Health-related quality of life	Overall		
pembrolizumab-containing treatment regimens		Moderate	Trivial or no	Moderate		

	<p>Additional considerations:</p> <p>In 2019, the Expert Committee recommended adoption of a threshold for benefit of at least 4-6 months overall survival gain and without detriment to quality of life for cancer medicines or regimens to be considered as candidates for inclusion on the WHO EML (4). Based on this recommendation, the following decision rules were considered in judging the magnitude of effects:</p> <ul style="list-style-type: none">• The outcomes overall survival and health-related quality of life were considered of critical importance to patients with HNSCC – more weight was placed on them in the decision-making process when compared to progression-free survival and adverse events.• ICIs demonstrating a median overall survival benefit greater than the recommended WHO threshold (i.e. > 4-6 months) would be considered to have a large benefit.• ICIs demonstrating a median overall survival benefit within the range of the recommended WHO threshold (i.e. between 4 and 6 months) would be considered to have a moderate benefit.• ICIs demonstrating a median overall survival benefit smaller than the recommended WHO threshold (i.e. < 4-6 months) would be considered to have a small benefit. <p>Median overall survival was 6 months more in people treated with pembrolizumab-containing treatment regimens. The ESMO-MCBS Scorecard, based on the KEYNOTE-048 trial, reports a score of 4 for pembrolizumab-containing treatment regimens in the HNSCC non-curative setting. Taken together, the magnitude of desirable effects was judged as moderate in size for the outcome overall survival.</p> <p>Pembrolizumab-containing treatment likely results in no to little difference in health-related quality of life.</p> <p>The overall judgement related to the magnitude of desirable effects cannot be lower than the highest rating across critical outcomes. Given the highest rating across the critical outcomes was moderate, the magnitude of the overall desirable effects was judged as moderate in size as well.</p>

Certainty of evidence

What is the overall certainty of the evidence of effects?

JUDGEMENT

RESEARCH EVIDENCE

- Very low
- Low
- **Moderate**
- High
- No included studies

Domain	Judgement per critical outcome			Judgement across critical outcomes
ICIs	Overall survival	Health-related quality of life	Adverse events	Overall
pembrolizumab-containing treatment regimens	Moderate	Moderate	Moderate	Moderate

Additional considerations:

Across the critical outcomes, the lowest certainty of evidence rating was moderate for pembrolizumab-containing treatment regimens. Thus, the overall certainty of the evidence of effects was judged as moderate.

Values

Is there important uncertainty about or variability in how much people value the main outcomes?

JUDGEMENT	RESEARCH EVIDENCE									
<div>○ Important uncertainty or variability</div> <div>○ Possibly important uncertainty or variability</div> <div>○ Probably no important uncertainty or variability</div> <div>○ No important uncertainty or variability</div>	<p>A systematic review of qualitative research identified 17 studies published between 2017 and 2022 that addressed the experience of patients considering or using checkpoint inhibitors in cancer, including pembrolizumab for HNSCC (5). Overall, patients viewed immune checkpoint inhibitors positively when compared to other anti-cancer treatments, noting newfound hope, fewer or more manageable treatment-related side effects, and among those experiencing treatment success, improved quality of life when compared to chemotherapy and radiation therapy. In some cases, patients were uncertain about response durability long-term and checkpoint inhibitor-specific adverse events. Patient concerns around checkpoint inhibitors may be mitigated, at least in part, by positive patient-practitioner relationships and support from other patients with lived checkpoint inhibitor experience by way of community groups. Further, fatigue is a common checkpoint inhibitor-specific adverse event. Implementing supportive care programs can help patients undergoing checkpoint inhibitor treatment cope with fatigue and maximize their quality of life.</p> <p>It was noted that most studies included in this systematic review omitted patients that discontinued checkpoint inhibitor treatment due to serious adverse events or failed to respond to checkpoint inhibitor treatment limiting our understanding of patient experiences with checkpoint inhibitors in this regard.</p> <table><tr><th colspan="3">Importance of uncertainty and variability of how people value outcomes</th></tr><tr><th>ICIs</th><th>Net balance</th><th>Judgement</th></tr><tr><td>pembrolizumab-containing treatment regimens</td><td>Moderate net desirable</td><td>Probably no important uncertainty or variability</td></tr></table> <p>Additional considerations:</p> <p>A judgement was made that how much people value the main outcomes, including overall survival, lies on a spectrum, and depends on the magnitude of benefit and harm from treatment. In a situation with trivial benefit and large harm, it was inferred that most people would not choose to pursue treatment if available. In a situation with large benefit and trivial harm, it was inferred that all or almost all people would choose to pursue treatment if available.</p> <p>Considering the moderate net benefit and patient perspectives from qualitative studies, it was judged that people would probably have no important uncertainty or variability in how much they value the main outcomes, particularly preferring avoiding premature death.</p>	Importance of uncertainty and variability of how people value outcomes			ICIs	Net balance	Judgement	pembrolizumab-containing treatment regimens	Moderate net desirable	Probably no important uncertainty or variability

Median retail unit price (USD) for pembrolizumab concentrate (100 mg vial) across World Bank income levels*:

Income level	Median	IQR	Sample size based on number of countries
HIC	3773.16	2928.38 to 4377.63	35
UMIC	3452.32	3027.62 to 4001.05	12
LMIC	2345.89	265.67 to 2812.69	3

Source: author derived calculation based on most recent available retail prices (as of November 2024) extracted from GlobalData Price Intelligence (POLI) and Eversana NAVLIN Price & Access datasets. Latest publicly available country-specific prices may be accessed via sources listed here, where available: <https://www.who.int/teams/health-product-and-policy-standards/medicines-selection-ip-and-affordability/affordability-pricing/med-price-info-source>

Additional considerations:

Relative to other EML medicines, the costs of pembrolizumab at the current unit pricing are large across World Bank income levels. It was noted that country costs for pembrolizumab correlate with income level, with the highest median wholesale and retail prices observed in high-income countries. Further, within an income level, there was substantial variation in prices which can be in part attributed to pricing dynamics at the country level and the limited number of countries informing each income level. These small sample sizes reduce our confidence in the estimates, especially for LMICs for which data from only three countries was available. Further, there were no data available for LICs.

Nonetheless, harnessing pricing dynamics is needed to promote implementation and affordable use of pembrolizumab at the country level. Of note, biosimilar entry for pembrolizumab is anticipated in the next 3 to 5 years (2028 to 2023). Given its dominant role in several critical indications, it likely has the largest potential for cost reduction (6).

Cost effectiveness

Does the cost-effectiveness of the intervention favor the intervention or the comparison?

JUDGEMENT	RESEARCH EVIDENCE																																																							
<div><div>○ Favors the comparison</div><div>○ Probably favors the comparison</div><div>○ Does not favor either the intervention or the comparison</div><div>○ Probably favors the intervention</div><div>○ Favors the intervention</div><div>○ Varies</div><div>○ No included studies</div></div>	<div>Evidence addressing cost-effectiveness of pembrolizumab for the first-line treatment of patients with recurrent or metastatic head and next squamous cell carcinoma was available from select countries, including Argentina (UMIC) (7), China (UMIC) (2), Colombia (UMIC) (8), and the United States (HIC) (1). Whether pembrolizumab was found to be cost-effective depended in part on local willingness-to-pay thresholds, which are often based on a country's per capita gross domestic product. Therefore, the cost-effectiveness of pembrolizumab is anticipated to vary across settings.</div> <table><tr><th>Country</th><th>Income level</th><th>WTP threshold</th><th>ICER</th><th>Cost-effective?</th></tr><tr><td>United States</td><td>HIC</td><td>USD 100,000 / QALY</td><td>USD 86,827 / QALY</td><td>Yes</td></tr><tr><td>Argentina</td><td>UMIC</td><td>AR 1,676,122 / QALY</td><td>AR 170,985 / QALY</td><td>Yes</td></tr><tr><td>China</td><td>UMIC</td><td>USD 28,130 / QALY</td><td>USD 65,186 / QALY</td><td>No</td></tr><tr><td>Colombia</td><td>UMIC</td><td>COP 69,150,201 / QALY</td><td>COP 61,078,685 / QALY</td><td>Yes</td></tr></table> <div>Empirical evidence estimating cost-effective thresholds based on health expenditures per capita and life expectancy at birth was available for 174 countries (9). As of 2019, the following cost-effectiveness thresholds in USD per QALY were estimated for each country income level. The authors noted that their empirically derived thresholds were lower than those used in many countries. If used, they may result in more conservative health decision-making.</div> <table><tr><th>Income level</th><th>Range</th><th>Median</th><th>IQR</th><th>Sample size based on number of countries</th><th>Cost-effective?</th></tr><tr><td>HIC</td><td>\$5480–\$95958</td><td>\$18,218</td><td>\$10229–\$43175</td><td>54</td><td>Varies</td></tr><tr><td>UMIC</td><td>\$1108–\$10638</td><td>\$4,355</td><td>\$2886–\$5301</td><td>48</td><td>No</td></tr><tr><td>LMIC</td><td>\$190–\$3249</td><td>\$745</td><td>\$451–\$1389</td><td>49</td><td>No</td></tr><tr><td>LIC</td><td>\$87–\$320</td><td>\$163</td><td>\$131–\$229</td><td>23</td><td>No</td></tr></table> <div>To help achieve cost-effective use of pembrolizumab across World Bank income settings without compromising efficacy and safety, alternative dosing strategies have been proposed (10). They include electronic rounding, hybrid dosing, lower dose selection, interval extension and shortening of treatment duration. The scientific basis for these alternative dosing strategies is growing and is based on evidence from both clinical trials and pharmacokinetic studies.</div> <div>Additional considerations:</div> <div>In the absence of a <i>de novo</i> cost-effectiveness model that considers diverse income settings and alternative dosing strategies for pembrolizumab, a judgement on the cost-effectiveness was made based on select examples and empirically derived cost-effective thresholds. While pembrolizumab-containing treatment regimens has moderate desirable effects in HNSCC, at the current price, it is likely not cost-effective in most settings, particularly in LMICs and LICs, and when diagnostic requirements are considered.</div> <div>Clinically proven alternative dosing strategies may be an important step in helping achieve cost-effective use of pembrolizumab in more settings.</div>	Country	Income level	WTP threshold	ICER	Cost-effective? Availability

What is the regulatory status, market availability and on-the-ground availability/access of the medicine to patients?

JUDGEMENT	RESEARCH EVIDENCE
<ul style="list-style-type: none"> ○ Not available in most settings ○ Probably not available in most settings ○ Probably available in most settings ○ Available in most settings ○ Varies ○ Don't 	<p>Pembrolizumab is approved for use in 85 countries worldwide – mainly high-income countries including Canada, the United States, European Union member countries and Japan (12).</p> <p>Data on the availability, out-of-pocket costs, and accessibility of pembrolizumab for melanoma, non-small cell lung cancer, colorectal cancer and renal cell carcinoma were available from the 2023 update to the ESMO Global Consortium Study (13). In HICs, pembrolizumab for melanoma was “almost always available to patients at no cost or on a subsidized basis”. In LMICs and LICs, when available, however, pembrolizumab was “generally provided only at full cost as an out-of-pocket expenditure for patients”. Although pembrolizumab for melanoma was almost always actually available in HICs (accessibility with a valid prescription), there was important variation in the actual availability across UMICs, LMICs and LICs. Outside of HICs, pembrolizumab for non-small cell lung cancer, colorectal cancer and renal cell carcinoma was more commonly provided as an out-of-pocket expenditure for patients than not – often at full cost to the patient. These data provide indirect evidence regarding the extent of pembrolizumab availability for HNSCC across World Bank income settings.</p> <p>Additional considerations:</p> <p>Pembrolizumab is approved for use in many countries; however, on-the-ground access outside of HICs is limited.</p>
