

18/11/2024

To,

Dr Guy Fones, Lead, NCD Strategy, Director, Department of NCDs, World Health Organisation

Dr Bianca Hemmingsen, Medical Officer, NCD Department, WHO

Dr Lorenzo Moja, Scientist, EML Department, WHO

Ms. Bernadette Cappello, Technical Officer, EML Department, WHO

Re: Support the Inclusion of Rapid-Acting Insulin and GLP-1 RAs for Diabetes in the WHO EML

Dear Expert Committee on the Selection and Use of Essential Medicines,

Diabetes prevalence is escalating worldwide, particularly in low- and middle-income countries (LMICs), where treatment challenges are significant and disproportionately affect vulnerable communities, including children, women, and people living with HIV.

On World Diabetes Day, we, as individuals living with diabetes, health organizations, vulnerable communities, and treatment activists, are writing to endorse the inclusion of rapid-acting insulin analogues and GLP-1 receptor agonists (RAs) on the WHO Model List of Essential Medicines (WHO EML). This inclusion is crucial for improving the accessibility of effective diabetes treatments in LMICs.

Support for the inclusion of rapid-acting analogues to improve access to basal-bolus regimen for Type 1 diabetes

Human insulin has been part of the WHO EML since its inception in 1977, and long-acting insulin was added in 2021. While insulin pens improve dosing accuracy and reduce stigma, the failure of the key manufacturer Novo Nordisk to bid in the 2024 tender to supply human insulin pens to the Department of Health in South Africa underscores the procurement challenges in LMICs. It is vital that treatment providers have the flexibility to procure insulin analogues in pen devices to ensure continued supply to people with diabetes who need this life-saving drug.

By simplifying and standardizing the types of insulin and pen devices for type 1 and type 2 diabetes management, WHO can support efforts to improve accessibility for people with diabetes. Governments should consider both long-acting and rapid-acting analogues for procurement, as they offer greater flexibility in the timing of dosing and can improve the quality of life for people with type 1 diabetes. We therefore urge the committee to recommend the

inclusion of rapid-acting insulin analogues in the WHO EML, enabling governments, humanitarian agencies, and other procurers to make evidence-based decisions that align with the quality-of-life needs of people with diabetes.

As some of these long-acting and rapid-acting analogues (such as glargine and aspart) are off-patent and available as biosimilars, there is an opportunity to leverage pooled procurement at the national level through tendering and competitive bidding by health departments and NCD programs to lower prices.

Thus, we support T1 International's request to include rapid-acting insulin analogues in the WHO EML.

Support for the inclusion of GLP-1 Receptor Agonists for Type 2 diabetes

Metformin was added to the WHO EML in 2019, and sodium-glucose co-transporter-2 (SGLT2) inhibitors were included in 2021, marking positive steps forward. However, patients with type 2 diabetes also need access to insulin-sparing regimens and medicines that have been demonstrated to reduce mortality.

The integration of insulin in type 2 diabetes management often faces challenges. Many patients and healthcare workers hesitate to initiate insulin therapy due to concerns about hypoglycemia and associated stigma. Transitioning to insulin-inclusive regimens also requires extensive patient education and can be challenging for health systems in resource-poor settings.

Including appropriate GLP-1 receptor agonists in the WHO EML will facilitate their adoption in LMIC clinical settings, providing significant benefits to at-risk populations. Recent cost-of-production estimates suggest substantial price reductions, especially with generics entering the market as they go off-patent in 2024 and 2026. The potential exists for a month's supply of GLP-1 RAs to cost less than one month's supply of human insulin in a vial. Therefore, we strongly support the submission to include GLP-1 RAs in the WHO EML.

Therefore, we support and request the inclusion of GLP-1 receptor agonists in the WHO EML.

We believe that including rapid-acting insulin and GLP-1 RAs in the Model List of Essential Medicines is essential for improving access to diabetes treatment in LMICs.

Sincerely,

Signatories,

Persons living with diabetes:
