RE: BLINATUMOMAB

Dear WHO,

As a practicing Hematologist/Oncologist and Bone Marrow Transplant Physician, I have had the privilege of treating dozens of children and adults with Blinatumomab.

This drug is currently approved for:

ALL with positive MRD

ALL Relapsed or Refractory

ALL Ph neg, as Consolidation

It will likely be a good addition to WHO List of essential medications for Middle & Low income countries if the price is right and support programs are available.

Sincerely,

Dr. M Ayaz Mir, FACP
