

# Plastics in health care

8 November 2023  
13:30-15:00 CET

Zoom

The potential impacts of plastics on human health have become an issue of increasing global concern

There is increasing public awareness and overwhelming consensus amongst all stakeholders that plastics do not belong in the environment and that measures should be taken to mitigate exposure to nano- and microplastics and harmful chemicals released during plastics manufacture, use and disposal

## Plastics are widely used in health care

While it is essential to ensure affordable access to essential medicines and medical devices, considerations of reducing, reusing, repairing, recycling and proper disposal of plastics in healthcare are important for reducing plastic uses and harms.

### Speakers

**LESLEY ONYON**  
WHO Chemical Safety Unit

**SUSAN WILBURN**  
For Health care Without Harm

**GABRIELA SARDON PANTO**  
WHO Oral Health Programme

**LUDWIG ALBORNOZ**  
Fundación Valle de Lili, Columbia

**PREETI MEHOTRA**  
Harvard Medical School

**RUTH INNES, ABIGAIL HEIJGELAAR**  
NHS Scotland

**DEIRDRE DIMANCESCO**  
WHO Health Products Policies and Standards

**MAGGIE MONTGOMERY**  
WHO Water, Sanitation, Hygiene and Health Unit

**JULIEN POUILLE**  
UNITAID

**KIRTI SRIVASTAVA**  
King George's Medical University, India

**MEGHA RATHI**  
WHO Environmental Safeguards

**ADRIANA VELAZQUEZ**  
WHO Medical Devices Unit
