WORLD HEALTH ORGANIZATION

Update Reference Committee

30 November 2002

OFFICIAL UPDATES TO ICD-10

The following pages include the official changes to the tabular list, instruction manual and alphabetical index of ICD-10. These changes were approved in principle at the HoC meeting in Brisbane, Australia in October 2002. Each change has been uniquely identified and the source for each change has been indicated. The implementation date has also been documented.

(Note: Every effort has been made in the following pages to reproduce the content of the ICD-10 in the same format as the published volumes. Page references have not been used in all instances since these do not apply to electronic versions of the Classification. Additions/changes have been indicated through the use of instructions, underline and ~~strikeout~~).

Volume 1	TABULAR LIST

Instruction	Tabular list entries	Source	Major/Minor update	Implementation date
Page 50 Modify category descriptor	**List of three character categories** **Cerebral palsy and other paralytic syndromes (G80-G83)** G80 ~~Infantile~~ <u>Cerebral</u> palsy	Australia (URC:0045)	Major	January 2006
Page 71 Revise code Add category code and title	**Three character categories** **Other obstetric conditions, not elsewhere classified (<u>O94</u>-O99)** <u>O94 Sequelae of complication of pregnancy, childbirth and the puerperium</u>	Australia (URC:0112)	Major	January 2006
Page 107 Add instruction	**Certain infectious and parasitic diseases (A00-B99)** <u>Use additional code (U80.- – U89.-), if desired, to identify the antibiotic to which a bacterial agent is resistant</u>	Australia/ NORDIC (URC:0026)	Major	January 2006
Add inclusion term Add excludes notes	**A98.5 Haemorrhagic fever with renal syndrome** <u>Hantavirus disease with renal manifestations</u> ***Excludes:*** <u>hantavirus (cardio)-pulmonary syndrome (B33.4† J17.1*)</u>	Brazil (URC:0042)	Major	January 2006
Add new code and description Add inclusion terms Add instructional note Add excludes note	**B33 Other viral diseases, not elsewhere classified** **B33.4† Hantavirus (cardio)-pulmonary syndrome [HPS] [HCPS] (J17.1*)** <u>Hantavirus disease with pulmonary manifestations</u> <u>Sin Nombre virus disease</u> <u>Use additional code (N17.9) , if desired, to identify any renal failure associated with HPS caused by the Andes, Bayou and Black Creek Canal hantavirus aetiologies.</u> ***Excludes:*** <u>haemorrhagic fever with renal manifestations (A98.5† N08.0*)</u>	Brazil (URC:0042)	Major	January 2006

Delete inclusion term	**C71.0 Cerebrum, except lobes and ventricles** ~~Corpus callosum~~	UK (URC: 0015)	Minor	January 2004
Page 321 Add excludes note	**.0 Acute intoxication** ***Excludes:*** intoxication meaning poisoning (T36-T50)	MRG (URC:0116)	Major	January 2006

	     Excludes: ~~drug dependence and related mental and behavioural disorders due to pseyhoactive substance use (F10-F19)~~
	        intoxication meaning inebriation (F10-F19)
		MRG (URC:0116)	Major	January 2006

Delete exclusion term Add exclusion term	**T42 Poisoning by antiepileptic, sedative-hypnotic and antiparkinsonism drugs** *Excludes:* ~~drug dependence and related mental and behavioural disorders due to pscyhoactive substance use (F10-F19)~~ intoxication meaning inebriation (F10-F19)	MRG (URC:0116)	Major	January 2006
Delete exclusion term Add exclusion term	**T43 Poisoning by psychotropic drugs, not elsewhere classified** *Excludes:* ~~drug dependence and related mental and behavioural disorders due to pscyhoactive substance use (F10-F19)~~ intoxication meaning inebriation (F10-F19)	MRG (URC:0116)	Major	January 2006
Modify excludes note	**T44.5 Predominantly β-adrenoreceptor agonists, not elsewhere classified** *Excludes:* ~~salbutamol~~ β-adrenoreceptor agonists used in asthma therapy (T48.6)	Australia (URC:0076)	Major	January 2006
Add inclusion term Modify excludes note	**T48.6 Antiasthmatics, not elsewhere classified** β-adrenoreceptor agonists used in asthma therapy *Excludes:* β-adrenoreceptor agonists not used in asthma therapy (T44.5)	Australia (URC:0076)	Major	January 2006

Add block	**Bacterial agents resistant to antibiotics (U80-U89)**	Australia/ NORDIC (URC:0026)	Major	January 2006
Add note	*Note:* These categories should never be used in primary coding. They are provided for use as supplementary or additional codes when it is desired to identify the antibiotic to which a bacterial agent is resistant, in bacterial infection classified elsewhere			
Add category, codes and code descriptions	**U80 Agent resistant to penicillin and related antibiotics** **U80.0 Penicillin resistant agent** **U80.1 Methicillin resistant agent** **U80.8 Agent resistant to other penicillin-related antibiotic**			
Add category, codes and code descriptions	**U81 Agent resistant to vancomycin and related antibiotics** **U81.0 Vancomycin resistant agent** **U81.8 Agent resistant to other vancomycin-related antibiotic**			
Add category	**U88 Agent resistant to multiple antibiotics**			
Add note	*Note:* This category is provided for use when a bacterial agent is resistant to two or more antibiotics but there is insufficient detail to determine which antibiotic is contributing most to the "main condition". It should also be used for primary tabulation purposes when it is more convenient to record a single code; otherwise each specific antibiotic-resistant agent should be coded separately.			
Add category, codes and code descriptions	**U89 Agent resistant to other and unspecified antibiotics** **U89.8 Agent resistant to other single specified antibiotic** **U89.9 Agent resistant to unspecified antibiotic**			
Modify code title	**X25 Contact with other ~~specified~~ venomous arthropods**	Dutch Committee on Translation of ICD-10 (URC: 0082)	Major	January 2006

On neonatal or infant death certificates, where lung or pulmonary hypoplasia is given with any mention of immaturity, prematurity, short gestation or low birth weight, code to pulmonary immaturity (P28.0) and not to Q33.6.	MRG (URC:0118)	Major	January 2006
Paste these recommendations into Volume 2 after page 138 and before page 139.	Recommendations 1. Responsibility for medical certification of cause of death (see section 5.2) The medical certification of the cause of death is normally the responsibility of the attending physician. In the case of deaths certified by coroners or other legal authorities, the medical evidence supplied to the certifier should be stated on the	MRG (URC:0113)	Major	January 2006

certificate in addition to any legal findings.

2.   Form of medical certificate of cause of death (see sections 5.2, 4.1.3, and 4.3.1)

The medical certificate of cause of death should be in line with the international recommendation (see section 4.1.3). Collection of perinatal mortality statistics should be consistent with the recommendations presented in section 4.3.1.

3.   Confidentiality of medical information (see section 5.2)

Administrative procedures should ensure the confidentiality of data from the death certificate or other medical records.

4.   Selection of the cause for mortality tabulation (see section 4.1.1)

The causes of death to be entered on the medical certificate of cause of death are all diseases, morbid conditions or injuries resulting in or contributing to death and the circumstances of the accident or violence resulting in injuries. When only one cause of death is recorded, this cause is selected for tabulation. When more than one cause of death is recorded, selection should be made in accordance with the rules and guidelines given in the ICD.

5.   Use of the International Classification of Diseases (see sections 2.1, 2.2, and 3.3)

The purpose of the ICD is to permit the systematic recording, analysis, interpretation and comparison of mortality and morbidity data collected in different countries or areas and at different times. The "core" classification of ICD-10 is the three-character code, which is the mandatory level of coding for international reporting to the WHO mortality database and for general international comparisons. The four-character subcategories, while not mandatory for reporting at the international level, are recommended for many purposes and form an integral part of the ICD, as do the special tabulation lists.

Mortality and morbidity statistics should be coded according to the tabular list of inclusions and the alphabetical index. Fourth-character subcategories, when published, should be those of the ICD. Any additions or variations should be indicated in published statistical tables.

6.   Perinatal mortality statistics (see sections 5.7.2 and 5.7.3)

It is recommended that all fetuses and infants weighing at least 500 g at birth, whether alive or dead, should be included in *national* statistics. When information on birth weight is unavailable, the corresponding criteria for gestational age (22 completed weeks) or body length (25 cm crown-heel) should be used. The criteria for deciding whether an event has taken place within the perinatal period should be applied in the order: (1) birth weight, (2) gestational age, (3) crown-heel length. The inclusion of

fetuses and infants weighing between 500 g and 1000 g in national statistics is recommended both because of its inherent value and because it improves the coverage of reporting at 1000 g and over.

In statistics for international comparison, inclusion of the extremely low-birth-weight group disrupts the validity of comparisons and is not recommended. Countries should also present statistics in which both the numerator and the denominator of all ratios and rates are restricted to fetuses and infants weighing 1000 g or more (weight-specific ratios and rates); where information on birth weight is not available, the corresponding gestational age (28 completed weeks) or body length (35 cm crown-heel) should be used.

7.   Maternal mortality statistics (see sections 5.8.2 and 5.8.3)

Published maternal mortality rates should always specify the numerator, which can be given as: the number of recorded direct obstetric deaths, or the number of recorded obstetric deaths (direct plus indirect). For the purpose of international reporting of maternal mortality, only those maternal deaths occurring before the end of the 42-day reference period should be included in the calculation of the various ratios and rates, although the recording of later deaths is useful for national analytical purposes.

8.   Statistical tables (see sections 5.6.1 and 5.7.4)

The degree of detail in cross-classification by cause, sex, age, and geographical area will depend both on the purpose and range of the statistics and on the practical limits to their tabulation. Standard ways of presenting statistics are described in sections 5.6.1 and 5.7.4 to promote international compatibility.

9.   Tabulation of causes of death (see sections 5.6.2 and 5.6.4)

Statistics of causes of death for a defined area should be in accordance with recommendations in section 5.6.1. Deaths should preferably be classified by sex and age group as in recommendations in section 5.6.1. For statistics of perinatal mortality, full-scale multiple-cause analysis of all conditions reported will be of greatest benefit. Where such analysis is impracticable, analysis of the main disease or condition in the fetus or infant and of the main maternal condition affecting the fetus or infant with cross-tabulation of groups of these two conditions should be regarded as the minimum. Where it is necessary to select only one condition, the main disease or condition in the fetus or infant should be selected.

	Appendix 7.1 **List of conditions unlikely to cause death**	MRG (URC:0122)	Minor	January 2004

	Code	**Category or subcategory**			
Revise code	H54.0 – <u>H54.7</u>	Blindness and low vision			
Delete codes and text	~~H59.0 – H59.9~~	~~Postprocedural disorders of eye and adnexa, not elsewhere classified~~			
Delete code And text	~~M72.5~~	~~Fasciitis, not elsewhere classified, except necrotizing fasciitis~~			
Revise code	N92.0 – <u>N92.6</u>	Excessive, frequent, and irregular menstruation			

Volume 3	**ALPHABETIC INDEX**
