

# Health and environment scorecard Central African Republic

Summary score: **34**

Exposure score: 21    Health score: 49    Policy score: 31

The scores represent simple averages. [See methods and results for additional information.](#) The scores are out of 100.

Air pollution

View actions and interventions

Extent of the problem

Health impact

Policies

5 x the WHO air quality guideline value for PM<sub>2.5</sub>

---

WHO Guideline (annual mean): 5 µg/m<sup>3</sup>    Annual country mean: **27 µg/m<sup>3</sup>**

---

99% Population without clean fuels and technology for cooking

49% Deaths from stroke and ischaemic heart disease caused by air pollution<sup>1</sup>

---

<sup>1</sup> Air pollution causes many other diseases and adverse health outcomes, only stroke and ischaemic heart disease have been chosen for this scorecard.

Existence of legal standards for PM<sub>2.5</sub>

no

---

Compliant with WHO Air Quality Guidelines

N/A

---

Existence of national policy on household energy

N/A

WASH

View actions and interventions

94% Population without safe drinking water<sup>2</sup>

---

87% Population without safe sanitation<sup>2</sup>

---

<sup>2</sup> Operationalised as using safely managed drinking water and sanitation services.

79% Deaths from diarrhoea caused by unsafe drinking water, sanitation and inadequate personal hygiene

Sufficient funding for implementation of national plans

	Urban	Rural
Drinking water	N/A	N/A
	of what is needed	of what is needed
Sanitation	N/A	N/A
	of what is needed	of what is needed
WASH	Health care facilities	Schools
	N/A	N/A
	of what is needed	of what is needed

Climate change

View actions and interventions

97% Fossil fuels and traditional use of biomass in total final energy consumption

---

Percentage of hot days<sup>3</sup> in 2050 under a high emissions scenario<sup>4</sup>

N/A

---

<sup>3</sup>A 'hot day' is a day when maximum temperature exceeds the 90th percentile threshold for that time of year. The threshold is based on the period 1961-1990. Analysis by the Climatic Research Unit, University of East Anglia, 2018.

Heat deaths in 2050 compared to 1961-1990 period under a high emissions scenario<sup>4</sup> in the 65+ age group

N/A

---

<sup>4</sup> High emissions scenario RCP8.5 - Representative Concentration Pathway 8.5.

<sup>5</sup> Existence of a recent national assessment and plan refers to having conducted a climate change and health vulnerability and adaptation assessment and/or a health national adaptation plan (HNAP) since January 2020.

Existence of recent national assessment and plan<sup>5</sup>

	N/A	N/A
Vulnerability and adaptation assessment	N/A	Health National Adaptation plan (HNAP)

---

Commitment to COP26 Health Programme

	Climate resilient health systems	Sustainable low carbon health systems	Net zero commitment
	yes	yes	no

---

Inclusion of health co-benefits in Nationally Determined Contribution (NDC)

yes
