2 x the WHO air quality guideline value for PM_{2.5}

WHO Guideline (annual mean): 5 μg/m³

Annual country mean: 9 µg/m³

0% Population without

Health impact

Deaths from stroke and ischaemic heart disease caused by air pollution1

13%

Existence of legal standards for PM_{2.5}

yes

Compliant with WHO Air **Quality Guidelines**

no

Existence of national policy on household energy

N/A

clean fuels and technology for cooking

¹ Air pollution causes many other diseases and adverse health outcomes, only stroke and ischaemic heart disease have been chosen for this scorecard.

WASH

3%

Population without safe drinking water2

0% Population without safe sanitation2

18%

Deaths from diarrhoea caused by unsafe drinking water, sanitation and inadequate personal hygiene

Sufficient funding for implementation of national plans

Drinking water	Urban N/A	Rural N/A
	of what is needed	of what is needed
anitation	N/A of what	N/A of what

Health care facilities N/A

is needed

is needed

N/A of what of what

² Operationalised as using safely managed drinking water and sanitation services.

74%

Fossil fuels and traditional use of biomass in total final energy consumption

Percentage of hot days3 in 2050 under a high emissions scenario4

N/A

³A 'hot day' is a day when maximum temperature exceeds the 90th percentile threshold for that time of ear. The threshold is based on the period 1961

Analysis by the Climatic Research Unit, University of East Anglia, 2018.

Heat deaths in 2050 compared to 1961-1990 period under a high emissions scenario4 in the 65+ age group

N/A

⁵ Existence of a recent national assessment and plan refers to having conducted a climate change and health vulnerability and adaptation assessment and/or a health national adaptation plan (HNAP) since January 2020.

Sani

Existence of recent national assessment and plan5

Vulnerability and

Health National

is needed

Schools

is needed

Adaptation plan adaptation (HNAP) assessment

Commitment to **COP26 Health Programme**

Climate resilient health systems no

Sustainable low carbon health systems no

Net zero commitment no

Inclusion of health co-benefits in Nationally Determined Contribution (NDC)

no

Pb

Mean blood lead level in children under 5 years*

2 μg/dL

International Health Regulations (IHR) capacity score for chemical events⁶

100 %

(out of 100%)

 Key informants report on attainment of a set of attributes for chemical events (core capacity 14)

using a standard WHO instrument.

Poisoning deaths in 100,000 children under five, per year:

Existence of legal limit on lead paint

yes

Existence of a poison centre

yes

Party to the Minamata Convention on Mercury

yes

Radiation

View actions and interventions

International Health Regulations (IHR) capacity score for radiation emergencies⁷

100 %

(out of 100%)

⁷Key informants report on attainment of a set of attributes for radiation emergencies (core capacity 15) using a standard WHO instrument. Deaths per 100,000 people from melanoma and other skin cancers, per year:

6

Number of deaths per 100,000 people from residential radon, per year:*

3

Existence of standards on electromagnetic fields

yes

Existence of regulation of artificial tanning devices/sun beds

yes

Existence of national radon regulations for dwellings

yes

^{*} Data not undergone country consultation/ not UN data. N/A: not available.
