

# Health and environment scorecard France

Summary score: **77**

Exposure score: 75    Health score: 81    Policy score: 75

The scores represent simple averages.

[See methods and results for additional information.](#)

The scores are out of 100.

## Extent of the problem

## Health impact

## Policies

### Air pollution

**2 x** the WHO air quality guideline value for PM<sub>2.5</sub>

WHO Guideline (annual mean): 5 µg/m<sup>3</sup>

Annual country mean: **10** µg/m<sup>3</sup>

**0%**  
Population without clean fuels and technology for cooking

**14%**  
Deaths from stroke and ischaemic heart disease caused by air pollution<sup>1</sup>

<sup>1</sup> Air pollution causes many other diseases and adverse health outcomes, only stroke and ischaemic heart disease have been chosen for this scorecard.

Existence of legal standards for PM<sub>2.5</sub>

yes

Compliant with WHO Air Quality Guidelines

no

Existence of national policy on household energy

N/A

[View actions and interventions](#)

### WASH

**0%**  
Population without safe drinking water<sup>2</sup>

**10%**  
Population without safe sanitation<sup>2</sup>

<sup>2</sup> Operationalised as using safely managed drinking water and sanitation services.

**18%**  
Deaths from diarrhoea caused by unsafe drinking water, sanitation and inadequate personal hygiene

Sufficient funding for implementation of national plans

	Urban	Rural
Drinking water	N/A of what is needed	N/A of what is needed

	N/A of what is needed	N/A of what is needed
Sanitation		

	Health care facilities N/A of what is needed	Schools N/A of what is needed
WASH		

[View actions and interventions](#)

### Climate change

**83%**  
Fossil fuels and traditional use of biomass in total final energy consumption

Percentage of hot days<sup>3</sup> in 2050 under a high emissions scenario<sup>4</sup>

N/A

<sup>3</sup>A 'hot day' is a day when maximum temperature exceeds the 90th percentile threshold for that time of year. The threshold is based on the period 1961-1990. Analysis by the Climatic Research Unit, University of East Anglia, 2018.

Heat deaths in 2050 compared to 1961-1990 period under a high emissions scenario<sup>4</sup> in the 65+ age group

**31x more**

<sup>4</sup> High emissions scenario RCP8.5 - Representative Concentration Pathway 8.5.

<sup>5</sup> Existence of a recent national assessment and plan refers to having conducted a climate change and health vulnerability and adaptation assessment and/or a health national adaptation plan (HNAP) since January 2020.

Existence of recent national assessment and plan<sup>5</sup>

	N/A Vulnerability and adaptation assessment	yes Health National Adaptation plan (HNAP)

Commitment to COP26 Health Programme

	Climate resilient health systems yes	Sustainable low carbon health systems yes	Net zero commitment yes

Inclusion of health co-benefits in Nationally Determined Contribution (NDC)

no
