National response

Targets

National target for blood pressure
National target for salt consumption

Surveillance

Conducted recent, national survey measuring raised blood pressure/hypertension
Conducted recent, national survey on salt/sodium intake
Functioning system for generating reliable cause-specific mortality data on a routine basis

Treatment

Guidelines for management of hypertension

Footnotes: a. SBP ≥140 mmHg or DBP ≥90 mmHg or taking medication for hypertension. b. Control rate: adults aged 30–79 years receiving treatment, with blood pressure SBP <140 mmHg and DBP <90 mmHg. c. SBP ≥140 mmHg or DBP ≥90 mmHg. d. Progress and aspirational scenarios reflect a theoretical scaling up of treatment and control. e. Age-standardized estimates are presented for all indicators except salt intake.
