</tbody>
</table>

#### Availability of procedures for detecting, managing and treating oral diseases in the primary care facilities in the public health sector (2021)

| Oral health screening for early detection of oral diseases | available |
| Urgent treatment for providing emergency oral care & pain relief | available |
| Basic restorative dental procedures to treat existing dental decay | available |

#### Oral health interventions as part of health benefit packages (2021)

| Coverage of the largest government health financing scheme (% of the population) | ... |
| Routine and preventive oral health care | ... |
| Essential curative oral health care | ... |
| Advanced curative oral health care | ... |
| Rehabilitation oral health care | ... |
ORAL HEALTH COUNTRY PROFILE

NOTES AND REFERENCES

1 Total population in thousands (2020)
   Population estimates as of 1 July 2020 presented in thousands.
   (Data source: United Nations, Department of Economic and Social Affairs (DESA),
   Population Division. World Population Prospects 2022, Online Edition; 2022.)

2 Per capita current health expenditure in PPP int (2019)
   Per capita current expenditures on health expressed in respective currency - international
   Purchasing Power Parity (PPP) dollar.
   (Data source: WHO Global Health Observatory; 2019.)

ORAL DISEASE BURDEN

3 Prevalence of oral diseases (2019)
   Estimated prevalence of untreated caries of deciduous teeth in children 1-9 years:
   Rate of children between 1-9 years who have untreated caries in one or more deciduous teeth.
   Untreated caries is defined as a lesion in a pit or fissure, or on a smooth tooth surface, that has an
   unmistakable cavity, undermined enamel, or a detectably softened floor or wall (coronal caries), or feels soft or leathery to probing
   (root caries).
   Estimated prevalence of untreated caries of permanent teeth in people 5+ years:
   Rate of persons older than 5 years with one more carious permanent teeth.
   Untreated caries is defined as a lesion in a pit or fissure, or on a smooth tooth surface, that has an
   unmistakable cavity, undermined enamel, or a detectably softened floor or wall (coronal caries), or feels soft or leathery to probing (root caries).
   Estimated prevalence of severe periodontal disease in people 15+ years:
   Rate of persons aged 15 years and older affected by severe periodontal disease, a chronic
   inflammation of the soft and hard tissues that support and anchor the teeth. Severe
   periodontal disease is defined as a gingival pocket depth equal or more than 6 mm,
   or Community Periodontal Index of Treatment Needs (CPITN) also referred to as
   Community Periodontal Index (CPI) score of 4, or a clinical attachment loss (CAL)
   more than 6 mm.
   Estimated prevalence of edentulism in people 20+ years:
   Rate of persons older than 20 years with complete loss of natural teeth.
   Estimated prevalence from the Institute of Health Metrics and Evaluation (IHME)
   Global Burden of Disease Study 2019 (GBD2019) were computed by using population
   data from UN DESA: World Population Prospects 2019 and applying them to disease-
   relevant age groups.
   HME; 2020.)

4 Lip and oral cavity cancer (2020)
   Estimated number of new cases lip and oral cavity cancer: Estimated number of
   new cases of lip and oral cavity cancer in females, males and total population
   all ages.
   Estimated incidence rate of lip and oral cavity cancer (per 100 000 population):
   Age-standardized incidence rate of lip and oral cavity cancer in females, males and total population
   all ages per 100 000 population.
   (Data source: Ferlay et al. Global Cancer Observatory: Cancer Today. International Agency
   for Research on Cancer: Lyon, France; 2020.)

RISK FACTORS FOR ORAL DISEASES

6 Risk factors (2019)
   Per capita availability of sugar (g/day): The availability of sugar is based on sugar (raw
   equivalent) including i) raw cane or beet sugar, ii) cane sugar, centrifugal, iii) beet sugar,
   iv) refined sugar and v) sugar confectionery for national consumption and then computed
   as grams available per person and day.
   (Data source: United Nations Food and Agriculture Organization. Food Balance Sheets; 2019.)
   Prevalence of current tobacco use, 15+ years (%): The percentage of the population
   aged 15 years and older who currently use any tobacco product (smoked and/or smokeless
   tobacco) on a daily or non-daily basis (age-standardized rate).
   Per capita alcohol consumption, 15+ years (litres of pure alcohol/year): The total
   alcohol per capita consumption comprises both, the recorded and the unrecorded alcohol
   per capita consumption.
   (Data source: WHO Global Health Observatory; 2019.)

ECONOMIC IMPACT

8 Economic impact related to oral diseases, treatment and prevention (2019)
   Total expenditure on dental healthcare in million (US$): Estimate of total annual national
   expenditure on dental healthcare in outpatient dental care (public and private) in 2019.
   Per capita expenditure on dental healthcare (US$): Estimate of the annual national per
   capita expenditure on dental healthcare for outpatient dental care (public and private) in 2019.
   Total productivity losses due to 5 oral diseases in million (US$): Estimate of total
   productivity losses in 2019 resulting from combined impact of 5 untreated oral diseases
   including caries in deciduous and permanent teeth, severe periodontal disease, edentulism,
   and other oral conditions as defined by GBD.
   (Data source: Jevdjevic & Listl 2022.)
   Affordability of fluoride toothpaste (number of labour days needed to buy annual
   supply of fluoride toothpaste per person): Number of labour days needed to buy the
   recommended annual supply of fluoride toothpaste for one person based on the daily wage
   of the lowest-skilled government worker. Fluoride toothpaste is categorized as affordable
   if one day or less (≤ 1) of labour is needed and as unaffordable if more than one day (>1)
   of labour is needed to buy the annual supply for one individual.
   (Data source: WHO; 2019.)

NATIONAL HEALTH SYSTEM RESPONSE

10 Policies, measures and resources (2021)
   Implementation of tax on sugar-sweetened beverages (SSB): Status of implementation
   of taxes on sugar sweetened beverages (SSB). “Yes” responses refer to the application
   of excise taxes and/or special VAT/sales tax rates.
   Existence of a national oral health policy/strategy/action plan (2021):
   Status of implementation of a policy, strategy or action plan for oral health. “Yes”
   refers to a policy, strategy, or action plan for oral health that is operational or under
   development, and “no” refers to a policy, strategy, or action plan for oral health that is not
   in effect or where no response was given.

Presence of dedicated staff for oral health working on NCDs at the MoH: Presence of
   technical/professional staff in the unit/branch/department working on NCDs in the
   Ministry of Health dedicating a significant portion of their time to oral health.
   (Data source: WHO NCD Country Capacity Survey, NCD CCS; 2021.)

Noma recognized as a national public health problem: Noma (cancuris oris) is a non-
   communicable necrotizing disease that starts as a lesion of the gums inside the mouth
   and destroys the soft and hard tissues of the mouth and face. Countries are part of the
   Regional Noma Control Programme in the WHO African Region and recognize noma
   as a national public health problem.
   (Data source: Regional Noma Control Programme in WHO African Region; 2021.)

Oral health workforce
   Dental assistants and therapists: Dental assistants and therapists provide basic dental
   care services for the prevention and treatment of diseases and disorders of the teeth
   and mouth, according to care plans and procedures established by a dentist or other
   oral health professionals. The category of dental assistants and therapists also includes dental
   hygienist and dental nurses.

Dental prosthetic technicians: Dental prosthetic technicians design, fit, service
   and repair dental devices and appliances following prescriptions or instructions established
   by a health professional. They may serve a wide range of support instruments to correct
dental problems, such as dentures, and dental crowns and bridges.

Dentists: Dentists diagnose, treat and prevent diseases, injuries and abnormalities of
   the teeth, mouth, jaws and associated tissues by applying the principles and procedures
   of modern dentistry. They use a broad range of specialized diagnostic, surgical and other
   techniques to promote and restore oral health.

Per 10 000 population (2014-2019): Describes the ratio of the respective oral health
   professionals per 10 000 population (latest available data between 2014-2019).
   (Data source: The National Health Workforce Accounts (NHWA) data platform, WHO, 2020.)

Availability of procedures for detecting, managing and treating oral diseases
   in primary care facilities of the public health sector (2021)
   “Generally available” refers to reaching 50% or more patients in need whereas “generally
   not available” refers to reaching less than 50% of patients in need.
   • Availability of oral health screening for early detection of oral diseases.
   • Availability urgent treatment for providing emergency oral & oral pain relief.
   • Availability basic restorative dental procedures to treat existing dental decay.
   (Data source: WHO NCD Country Capacity Survey, NCD CCS, 2021.)

Oral health interventions as part of health benefit packages (2021)
   Inclusion of oral health interventions in public health Benefit Packages: The extent to which oral health interventions are included in the largest government health financing
   scheme. The term “largest” is defined as having the highest total population eligible to receive
   services, while the term “government” is defined as including any public sector scheme
   for health service provision, including coverage for groups such as the general population,
   public sector employees and/or the military. Interventions comprise:
   • Routine and preventive oral health care.
   • Essential curative oral health care (including non- surgical extraction and drainage of
     abscesses).
   • Advanced curative oral/dental care (including resin composite and dental amalgam including
     x-rays, complex fillings, root canal treatment).
   • Rehabilitative oral health care (including crowns and bridges, dentures, orthodontics,
     dental implants).
   (Data source: WHO Health Technology Assessment and Health Benefit Package Survey; 2021.)
