### National Health System Response

#### Policies, measures and resources (2021) \(^7\)

- Implementation of tax on sugar-sweetened beverages (SSB): yes
- Existence of a national oral health policy/strategy/action plan (operational/drafting stage): no
- Presence of dedicated staff for oral health working on NCDs at the MoH: no
- Noma recognized as a national public health problem: no

#### Oral Health Workforce \(^8\)

<table>
<thead>
<tr>
<th>Oral health workforce (^9)</th>

<td>2019</td>
<td>17</td>
<td>1.6</td>
</tr>
</tbody>
</table>

#### Availability of procedures for detecting, managing and treating oral diseases in the primary care facilities in the public health sector (2021) \(^9\)

- Oral health screening for early detection of oral diseases: available
- Urgent treatment for providing emergency oral care & pain relief: available
- Basic restorative dental procedures to treat existing dental decay: available

#### Oral health interventions as part of health benefit packages (2021) \(^10\)

- Coverage of the largest government health financing scheme (% of the population): ...

### NOTES AND REFERENCES

1. Total population in thousands (2020)
   - Population estimates as of 1 July 2020 presented in thousands.
   - (Data source: United Nations, Department of Economic and Social Affairs (DESA), Population Division. World Population Prospects 2022, Online Edition; 2022.)

2. Per capita current health expenditure in PPP int (2019)
   - Per capita current expenditures on health expressed in respective currency - international Purchasing Power Parity (PPP) dollar.
   - (Data source: WHO Global Health Observatory; 2019.)

### ORAL DISEASE BURDEN

   - Estimated prevalence of untreated caries of deciduous teeth in children 1-9 years: Rate of children between 1-9 years who have untreated caries in one or more deciduous teeth. Untreated caries is defined as a lesion in a pit or fissure, or on a smooth tooth surface, that has an unmistakable cavity, undermined enamel, or a detectably softened floor or wall (coronal caries), or feels soft or leathery to probing (root caries).
   - Estimated prevalence of untreated caries of permanent teeth in people 5+ years: Rate of persons older than 5 years with one more carious permanent teeth. Untreated caries is defined as a lesion in a pit or fissure, or on a smooth tooth surface, that has an unmistakable cavity, undermined enamel, or a detectably softened floor or wall (coronal caries), or feels soft or leathery to probing (root caries).
   - Estimated prevalence of severe periodontal disease in people 15+ years: Rate of persons aged 15 years and older affected by severe periodontal disease, a chronic inflammation of the soft and hard tissues that support and anchor the teeth. Severe periodontal disease is defined as a gingival pocket depth equal or more than 6 mm, or Community Periodontal Index of Treatment Needs (CPITN) also referred to as Community Periodontal Index (CPI) score of 4, or a clinical attachment loss (CAL) more than 6 mm.
   - Estimated prevalence of edentulism in people 20+ years: Rate of persons older than 20 years with complete loss of natural teeth.
   - Estimated prevalences from the Institute of Health Metrics and Evaluation (IHME) Global Burden of Disease Study 2019 (GBD2019) were computed by using population data from UN DESA World Population Prospects 2019 and applying them to disease-relevant age groups.

4. Lip and oral cancer (2020)
   - Estimated number of new cases lip and oral cavity cancer: Estimated number of new cases of lip and oral cavity cancer in females, males and total population all ages.
   - Estimated incidence rate of lip and oral cancer (per 100 000 population): Age-standardized incidence rate of lip and oral cancer in females, males and total population all ages per 100 000 population.

### RISK FACTORS FOR ORAL DISEASES

   - Per capita availability of sugar (g/day): The availability of sugar is based on sugar (raw equivalent) including i) raw cane or beet sugar, ii) cane sugar, centrifugal, iii) beet sugar, iv) refined sugar and v) sugar confectionery for national consumption and then computed as grams available per person and day.
   - (Data source: United Nations Food and Agriculture Organization. Food Balance Sheets; 2019.)
   - Prevalence of current tobacco use, 15+ years (%): The percentage of the population aged 15 years and older who currently use any tobacco product (smoked and/or smokeless tobacco) on a daily or non-daily basis (age-standardized rate).
   - Per capita alcohol consumption, 15+ years (litres of pure alcohol/year): The total alcohol per capita consumption comprises both, the recorded and the unrecorded alcohol per capita consumption.
   - (Data source: WHO Global Health Observatory; 2019.)

### ECONOMIC IMPACT

   - Total productivity losses due to 5 oral diseases in million (US$): Estimate of total productivity losses in 2019 resulting from combined impact of 5 untreated oral diseases including caries in deciduous and permanent teeth, severe periodontal disease, edentulism, and other oral conditions as defined by GBD.
   - (Data source: Jevdjevic & Listt 2022.)
   - Affordability of fluoride toothpaste (number of labour days needed to buy annual supply of fluoride toothpaste per person): Number of labour days needed to buy the recommended annual supply of fluoride toothpaste for one person based on the daily wage of the lowest-skilled government worker. Fluoride toothpaste is categorized as affordable if one day or less (≤1) of labour is needed and as unaffordable if more than one day (>1) of labour is needed to buy the annual supply for one individual.
   - (Data source: WHO; 2019.)

### NATIONAL HEALTH SYSTEM RESPONSE

10. Policies, measures and resources (2021)
   - Implementation of tax on sugar-sweetened beverages (SSB): Status of implementation of taxes on sugar sweetened beverages (SSB). “Yes” responses refer to the application of excise taxes and/or special VAT/sales tax rates.
   - Existence of a national oral health policy/strategy/plan (operational/drafting stage): Status of implementation of a policy, strategy or action plan for oral health. “Yes” refers to a policy, strategy, or action plan for oral health that is operational or under development, and “no” refers to a policy, strategy, or action plan for oral health that is not in effect or where no response was given.
   - (Data source: WHO NCD Country Capacity Survey, NCD CCS; 2021.)

### Oral health workforce

10. Dental assistants and therapists: Dental assistants and therapists provide basic dental care services for the prevention and treatment of diseases and disorders of the teeth and mouth, according to care plans and procedures established by a dentist or other oral health professionals. The category of dental assistants and therapists also includes dental hygienists and dental nurses.

### Oral health interventions as part of health benefit packages (2021)

10. Oral health interventions as part of health benefit packages: The extent to which oral health interventions are included in the largest government health financing scheme. The term “largest” is defined as having the highest total population eligible to receive services, while the term “government” is defined as including any public sector scheme for health service provision, including coverage for groups such as the general population, public sector employees and/or the military. Interventions comprise:
   - Routine and preventive oral health care.
   - Essential curative oral health care (including non-surgical extraction and drainage of abscesses).
   - Advanced curative oral/dental care (including resin composite and dental amalgam including x-rays, complex fillings, root canal treatment).
   - Rehabilitative oral health care (including crowns and bridges, dentures, orthodontics, dental implants).
   - (Data source: WHO Health Technology Assessment and Health Benefit Package Survey; 2021.)
