Delete: The updated 2023-2025 COVID-19 strategy outlines practical, high-level actions that need to be sustained as response activities are adjusted to address the drivers of SARS-CoV-2 transmission and prioritizes activities that will continue to lessen the impact of the COVID-19 disease. Activities outlined in Annex II are organized to reflect management and integration of COVID-19 activities along the five core components of WHO’s proposed global health architecture for health emergency preparedness, response and resilience. The components are emergency coordination, collaborative surveillance, community protection, safe and scalable care, and access to countermeasures.

Insert: The updated 2023-2025 COVID-19 strategy outlines practical, high-level actions that need to be sustained as response activities are adjusted to address the drivers of SARS-CoV-2 transmission and prioritizes activities that will continue to lessen the impact of the COVID-19 disease. Activities outlined in the upcoming document (see page 14) are organized to reflect management and integration of COVID-19 activities along the five core components of WHO’s proposed global health architecture for health emergency preparedness, response and resilience. The components are emergency coordination, collaborative surveillance, community protection, safe and scalable care, and access to countermeasures.

Delete: of the components relate to the COVID-19 2023-2025 updated strategy. More complete descriptions of critical actions under each of the five core components appear in Annex II. This updated global strategy will need to be further contextualized at Regional levels to take into consideration local context, capacities and challenges.
