Current Situation and Impact on Health

Ukraine

Casualties have been reported across the country and are expected to rise. Emergency Medical Services (EMS), surgical departments and intensive care units are likely to become overwhelmed with trauma patients. Essential health services have been disrupted and are collapsing and jeopardize the treatment of chronic/non-communicable diseases (NCDs) including diabetes, cancer, and cardiovascular diseases. Equally, there is disruption and lack of access to mental health and psychosocial support services, sexual, reproductive and maternal health care, ante-natal care, child health and assistance to people with disabilities.

There is poor or no access to primary health care institutions due to restricted mobility and security concerns, especially in areas of intense fighting, this disrupts the referral system; thereby making not only primary, but also secondary and tertiary care (hospitals and specialist centers) inaccessible to the population. Access to state programmes, such as “affordable drugs” and free insulin for diabetic patients has also been limited. Damage to health care infrastructure, curtailed access to referral hospitals and pharmacies, and personnel fleeing from conflict-affected areas are compounding to paralyse the health system.

Health care services disruptions coupled with conflict conditions increase the affected population’s vulnerability to communicable diseases, such as COVID-19, polio and measles. Poor vaccination coverage increases the risk of outbreaks of preventable communicable diseases, particularly among children; the COVID-19 pandemic and the recent reported cases of polio in the western part of the country compound this risk. Confinement conditions in shelters, population displacement, and infrastructure damage, make hygiene difficult to maintain, increasing the risk of respiratory and diarrheal diseases, which could rapidly have a large impact on the health of the population.

The pre-existing mental health and psychosocial support needs of the population have intensified. Health care workers face overloading, understaffing and are at increased risk of psychological distress and mental health disorders because of witnessing traumatic events.

WHO PRIORITIES

- Immediate emergency care for injured patients
- Provision of essential medical supplies to fill urgent gaps
- Ongoing assessments of health impact and humanitarian health needs
- Coordination of the international response, including Emergency Medical Teams (EMTs)
- Continuity of COVID care
- Infrastructural support for hospitals and health facilities
- Strengthening health information management

FUNDING NEEDS

USD 45 million
To secure medical supplies and cover essential health interventions in Ukraine.

USD 12.5 million
To secure medical supplies and cover essential health interventions in neighbouring countries.

Neighbouring countries
As of 01 March, 874,026 people may have already fled the violence in Ukraine. Poland alone has already welcomed over 453,982 refugees, Republic of Moldova 79,315, Hungary 116,348, Slovakia 67,000, Romania 44,540 and other European countries 69,600. UNHCR estimates that over 4 million people could flee from Ukraine and seek protection and support across the region. Partners involved in the implementation of the Regional Refugee Response Plan (RRRP), including World Health Organization (WHO), aim at assisting 2.4 million refugees and asylum-seekers in neighbouring countries.

The immediate health priorities include providing the fleeing population with access to EMS and to surgical services to treat trauma caused by violence and military operations. Additional priorities include provision of access to essential healthcare services and medication including for mothers and children, HIV and Tuberculosis patients as well as patients suffering from NCDs, access to mental health and psychosocial support.

Addressing the increased transmission of COVID-19 and other seasonal respiratory infections as well as of vaccine-preventable diseases such as measles or the vaccine-derived poliovirus (VDPV) in refugee populations is a matter of priority.

WHO Response in Focus

Ukraine
WHO’s overall response will continue to focus on saving lives, ensuring access to basic health services for those affected by armed conflict, COVID-19, polio and other health threats including technological, industrial and chemical, biological, radiological and nuclear hazards.

While WHO and other humanitarian partners are severely constrained due to the security situation, WHO is working closely with the Ministry of Health to collect data and requirements in terms of trauma care and oxygen capabilities, and to map healthcare facility needs. WHO, as the Health Cluster Lead, is also coordinating the response with health partners. The collection and analysis of health data from – including critical conflict-related indicators such as numbers of deaths and injured and attacks on healthcare – is a central focus of WHO.

WHO is establishing a logistics emergency center in Poland to deploy critical essential medical supplies, including trauma kits, life-saving medicines, laboratory supplies and other critical items through ground transportation into Ukraine, and to neighbouring countries.

Trauma care and continuity of care for all categories of patients, including those with chronic conditions in need of life-saving medication and care, as well as mental health and psychosocial support are key elements of the overall health response. WHO is working with local health authorities to address related needs on the ground in Ukraine. Ensuring that healthcare facilities are operational again will also be a central element of the response.

Continuity of COVID-19 and polio outbreak response activities is also vital, and it will be critical to sustain COVID response efforts, ensuring that all pillars of the response remain active and that there is a reliable supply of personal protective equipment (PPE), testing supplies, vaccines, therapeutics and other supplies to replace the lost and damaged materials in Ukraine.

Neighbouring countries
WHO country offices in Poland, Republic of Moldova, Hungary, Romania, Slovakia, and in other European countries are working closely with Ministries of Health to
address the immediate health needs of refugee arrivals. All offices are scaling up capacity through staff deployments. In neighbouring countries, WHO is operating under the interagency response as part of the RRRP coordinated by UNHCR.

The WHO emergency center in Poland will be used to deploy emergency medical supplies to support the immediate needs of affected population both inside and outside Ukraine. This center will also act as a base for WHO’s technical assistance, where WHO will house expertise covering health sector/cluster coordination, emergency medical team coordination, emergency medical care, COVID-19 and other communicable diseases control, primary healthcare and health service delivery and mental health. WHO Headquarters and its Regional Office for Europe are working jointly with the WHO offices in Ukraine (more than 130 staff before the escalation), Poland, Romania, Slovakia, Hungary and Moldova.

WHO will be focusing on trauma care and continuity of care for all categories of patients – including those with chronic conditions in need of life-saving medication and care. Mental health and psychosocial support will also be central elements of the response.

Given the high risk of transmission of COVID-19, other respiratory diseases and vaccine-preventable diseases including polio, particular attention will be granted to ensure robust disease surveillance systems are in place and care for patients suffering from those conditions is accessible while implementing relevant infection prevention and control measures.

WHO in coordination with UN partners will take comprehensive measures to prevent sexual exploitation and abuse in Ukraine and neighbouring countries during the operations.
