19	Group 1 - KEY ACCESS ANTIBIOTICS	To improve both access and clinical outcomes antibiotics that were first or second choice antibiotics in at least one of the reviewed syndromes are designated as key ACCESS antibiotics, emphasizing their role as the antibiotics that should be widely available, affordable and quality-assured
20	Group 2 - WATCH GROUP ANTIBIOTICS	This group includes antibiotic classes that have higher resistance potential and so are recommended as first or second choice treatments only for a specific, limited number of indications. These medicines should be prioritized as key targets of stewardship programs and monitoring.
21	Group 3 - RESERVE GROUP ANTIBIOTICS	This group includes antibiotics that should be treated as “last resort” options that should be accessible, but whose use should be tailored to highly specific patients and settings, when all alternatives have failed (e.g., serious, life-threatening infections due to multi-drug resistant bacteria). These medicines could be protected and prioritized as key targets of national and international stewardship programs involving monitoring and utilization reporting, to preserve their effectiveness.

The (a) symbol indicates that there is an age or weight restriction on use of the medicine; details for each medicine can be found in Table 1

[c] symbol is placed next to an individual medicine or strength of medicine it signifies that there is a specific indication for restricting its use to children
