

Solomon Islands Essential Medicines List

Foreword

It is my pleasure to introduce to you the 2017 Edition of the Solomon Islands Essential Medicines List (EML) and to once again launch this initiative to improve the availability of medicines information within this country. It is my hope that it will improve Rational Use of Medicines and allow all Health Workers to become more engaged in national health trends.

I would like to acknowledge the members of the National Medicines & Therapeutics Committee (NMTC) who have worked on producing this edition and who continue to dedicate considerable time into updating it.

Thank you also to the departments of National Referral Hospital and divisions of the Ministry of Health and Medical Services who have contributed submissions to the NMTC for changes to the EML. Whilst some submissions are not successful and all are subject to review, they are the basis for the ongoing discussions on changes to therapy. They stimulate the decision making process and we encourage you all to continue to support the NMTC in this way.

Please note that the EML does not represent specific prescribing advice – for individual drug protocols, please refer to the Standard Treatment Guidelines for Adults (green booklet) , Children (orange booklet) and the Solomon Islands Antibiotic Guidelines 2015. In situations where you are uncertain of treatment, please consult or refer your patient.

Solomon Islands Essential Medicines List

Preface

Hello and welcome to the Solomon Islands National Essential Medicines List (EML). This list is a compilation of all the medicines available in the Solomon Islands for the year 2017. It has been updated and collated for current use, representing all medicines available within the public health system of the Solomon Islands.

The EML is subject to constant review by the National Medicines & Therapeutics Committee (NMTC). Any Health Worker can make submissions for proposed changes or additions to the EML through a registered medical doctor then submitted to the Secretary of the NMTC, or through the Solomon Islands Medicines Information Centre (MIC). The MIC is contactable by phone on 24697, email solomonmedinfo@gmail.com or by radio at Selcall # 5555. The Secretary of the NMTC is contactable, c/o the Chief Pharmacist, National Pharmacy Services Division, based at the National Referral Hospital, telephone 20641.

Of course, the EML is likely to regularly change and for this reason, the NMTC prints new editions every two years, which will be sent to you. If you fail to receive yours, please contact the MIC or your local provincial hospital pharmacy department.

We hope you find this resource useful and user friendly. It is intended to greatly improve Health Worker's knowledge regarding their treatment options at each facility level. Please do NOT use this booklet as a guide to prescribing. Please be aware that many medicines are used for several different indications and the categorisation here represents only their primary use. All prescribing should be done according to your skills and training and if you have any concerns, please seek more information or refer your patient.

Information regarding any medicine, interaction or side effect can be sought between 8am and 4.30pm each weekday from the MIC using the details above.

Thank you and kind regards!

Adverse Drug Reaction Reporting

Adverse drug reactions occur more frequently than we may suspect. The Medicines Information Centre (MIC) is trying to monitor these adverse drug reactions to create a log of data specifically for Solomon Islands.

Adverse drug reactions may be different depending on the patient, so all reactions reported will help build our understanding of the side effects of drugs, especially side effects specific to Solomon Islanders.

If you notice any adverse drug reactions, or if patients report adverse drug reactions please contact the Medicines Information Centre.

- ☐ Phone: 24697
- ☐ Sell call number : 5555
- ☐ Email: solomonmedinfo@gmail.com

Information to record and report:

- ☐ **Age, sex, weight, ethnicity of the patient**
- ☐ **Name of the medicine**
- ☐ **Time medication was started**
- ☐ **Time adverse drug reaction was noticed**
- ☐ **What the reaction was – e.g. rash, anaphylaxis, bleeding**
- ☐ **What was done about it – e.g. medication ceased, dose reduced**
- ☐ **The outcome of the reaction – e.g. resolved, patient hospitalised, patient died**

Please consider adverse drug reactions or drug interactions as possible reasons for patient admission to hospital, and presentation to clinics.

For more information on adverse drug reactions, please contact MIC.
