

Global Network of WHO Collaborating Centres for Bioethics

An International Network of
Academic Centres Dedicated to Ethics
of Public Health and Research

World Health Organization (WHO) Collaborating Centres for Bioethics (CCs) are key institutions with relevant expertise distributed throughout the world. They represent a valuable resource as an extended and integral arm of WHO's capacity to implement its ethics mandate. The scientific validity of WHO's work on ethics is enhanced by ongoing collaboration and dialogue with academic centres. In this respect, WHO encourages connections and synergies among its CCs to achieve enhanced results, to facilitate resource mobilization and to strengthen (institutional) capacity, in particular at the regional level. WHO is committed to the development of CCs for bioethics in low- and middle-income countries and encourages active partnership between CCs in high- and low-resource settings. The Global Network of WHO Collaborating Centres for Bioethics has been created to advance these aims.

**WHO
Collaborating
Centres
for Bioethics**

Major Achievements

- **Global Health Ethics:** Joint development of WHO publications
- **Epidemics and Pandemics:** Key role in the development of WHO guidance documents and capacity-building in Member States
- **Public Health Surveillance:** Leading the development of WHO Ethics Guidelines
- **Research Ethics:** Providing educational activities and support for Member States
- **Tuberculosis:** Essential contribution to the development of WHO guidance document and education tools
- **Artificial Intelligence and Big Data:** Support for WHO guidance development and publication
