Global Migration in 2020

Over 1 billion people on the move

82.4 million
1 in 95 people is forcibly displaced, of which:

- 48 million Internally displaced people
- 26.4 million Refugees
- 4.1 million Asylum-seekers

281 million international migrants
3.6% of global population
1 in 30 people is a migrant

763 million internal migrants
11% of the global population

Despite the COVID-19 disruptions, displacements and migration are on the grow with increasing number of refugee and migrant families with young children, women and elderly

Key Public Health Issues

Overview

- Health system capacity and economic impact
- Access to health services and health-system access barriers (gender, cultural, financial, social and linguistic)
- Access to vaccination for COVID-19 and other vaccine-preventable diseases
- Health risk assessment, preparedness, exposure to hazards and public health implication for migrants and resident community
- State of health of migrants: changing health profile, Communicable Diseases & Noncommunicable Diseases, re-emerging neglected diseases
- Migration policy and integration, Universal Health Coverage (UHC)
- Public health data collection/generation, knowledge sharing, research agenda
- Political sensitiveness
Special Vulnerabilities of Refugees and Migrants

Overview

- Refugees and migrants face similar health threats from COVID-19 as their host population, but may be more exposed to the virus.
- The pandemic exacerbated pre-existing vulnerabilities and generated new ones.
- Refugees and migrants at greater risk include:
  - migrants in an irregular situation
  - asylum seekers
  - those who are in immigration centres or confined in camps
  - exploited migrant workers and victims of human trafficking

Trends in COVID-19 Global Response

Overview

- Responses varied widely across countries and over time
- Entry conditions more common than entry restrictions (restrictions subject to exception in most cases)

As of 26 October 2020

- **219 countries, territories and areas** have issued **96,202 travel-related measures**
- **27,800 entry restrictions** for passengers from certain countries, territories or areas
- 68,402 COVID-19 related conditions for authorized entry - 64% were medical measures
- **681 exceptions** issued by 167 countries (entry bans subject to conditions)
- **156 states** implemented full or partial border closure *(as of September 2020)* breaching international refugee laws

While remittances dropped sharply in the wake of COVID-19, in many LAC countries they recovered quickly and are now even outpacing 2019 flows.

Percent change in remittances (compared to the same period in 2019)

Trends in COVID-19 Global Response

Focus on equitable access to healthcare

- **Equitable access** is recognized but there are not effective nor cohesive policies (at global and even regional level)
  - Many countries provide equal access to health care to the whole population, including refugees and migrants
  - Tendency to lift the financial burden and cover COVID-19-related services
  - Adopted policies in some cases do not explicitly mention refugees, migrants or asylum seekers

- **Communication** often recognized as a tool to improve the accessibility of health care for refugees and migrants and limit the spread
  - Dissemination of information on emergency health care and other available services
  - Awareness raising about COVID-19 and preventive measures

In a number of countries

- Specific measures in **camps and camp-like settings**
  - Policies adopted include preventive measures to create preparedness and minimize the risk of contamination (e.g., mapping the areas most at risk and taking mitigating measures prioritizing the vulnerable population)

- Initiatives to increase **migrant workers’** protection in the time of COVID-19
  - short-term solutions (e.g., protection equipment and other preventive measures at the workplace)
  - mid- and long-term solutions with involvement of health insurance and social protection policies

**COVID-19 Immunization in Refugees and Migrants**

Key challenges in planning and rollout

- Global vaccine supplies, vaccine distribution and operational bottlenecks
- Exclusion of these populations in the National Deployment and Vaccination Plans (NDVPs) and prioritization of target populations
- Barriers in accessing to vaccination services (e.g., administrative, costs, security, access, health system capacity, etc.)
- Hesitancy to receive vaccine
- Lack of target population (e.g., irregular migrants), and coverage data
COVID-19 Immunization in Refugees and Migrants

Focus on barriers for these populations in accessing vaccination services

**Source:** Joint country monitoring by WHO, IOM, UNHCR, UNICEF and IFRC in 196 countries and territories to monitor vaccine rollout and identify barriers in accessing vaccines by migrants

**n=62** (42 low-middle income, 20 high income)

- Administration and registration issues: 26
- Limited information on where and how to access vaccines: 23
- Language barriers, social exclusion, stigma, etc: 22
- Fear of vaccine side effects: 20
- Country policy (exclusion of some migrants sub-groups): 20
- Vaccine hesitancy, misinformation, lack of awareness: 19
- Supply Chain: Not enough vaccines available: 14
- Fear of deportation or arrest: 13
- Lack of health System Capacity: 5
- Documentation is required in some areas/counties inside the country: 1

**Image:** Number of countries and territories showing different barriers to vaccination access for refugees and migrants.

Global Status of COVID-19 Vaccine Rollout in Refugees

Countries where refugees/persons of concern started receiving vaccine

The designations employed and the presentation of the material in this publication do not imply the expression of any opinion whatsoever on the part of WHO concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. Dotted and dashed lines on maps represent approximate border lines for which there may not yet be full agreement.

11/11/2021 | Special vulnerabilities, equitable access to service during a pandemic, tackle stereotypes and misinformation; Apart Together survey results
ApartTogether Survey

Preliminary overview of refugees and migrants self-reported impact of COVID-19

30,000 refugees and migrants interviewed living in 170 countries originating from 159 countries and territories

→ Significant impact of COVID-19 on their access to work, safety and financial means as well as their social and mental wellbeing

Refugees and migrants living on the streets, in insecure accommodation, in asylum centres and irregular migrants

- reported the worst impact on their daily lives
- were also less likely to seek healthcare for suspected symptoms (as well as respondents without any schooling)

**Financial constraints (35%) and fear of deportation (22%)** main reasons for not seeking healthcare

ApartTogether Survey

Preliminary overview of refugees and migrants self-reported impact of COVID-19

- **Significant impact of COVID-19 on their mental health conditions**
- **About 50%** reported greater level of depression, worry, anxiety and loneliness
- **One in five respondents** reported increased use of drugs and alcohol as it can trigger past traumatic experiences
- **Perceived worsened discrimination** in the context of the pandemic, particularly for respondents living on the street, in insecure accommodation and in asylum centres

11/11/2021 Special vulnerabilities, equitable access to service during a pandemic, tackle stereotypes and misinformation; Apart Together survey results
Conclusion

Key messages

Need for an integrated and coordinated approach to migration and public health

National health policies and supporting legislative and financial frameworks promoting migrants right to health

Universal Health Coverage, as a universal right - Fewer than one in two countries (43%) provide access to health services to all migrants, regardless of their legal status. Refugees and migrants should be included in governments’ vaccine allocation and distribution plans and ongoing essential health services.

Initiatives by countries such as suspended returns owing to unsafe conditions, extending residence and work permits, regularizing the status of undocumented migrants, and pursuing alternatives to detention.

Pandemic highlighted the value of migrant labour, urging countries to recognize their contributions, by ensuring fair and ethical recruitment, decent work, and access to health care and social protection.

Health systems sensitive to migrants needs, languages.

Building Back Better: strengthened health systems, increase resources for health, especially primary health care

Good health monitoring and data are needed to understand health needs and set priorities

Collaboration between countries and sectors is essential

Social inclusion and cohesion should be strengthened between host communities and migrants, and discrimination issues addressed.
Conclusion

Key messages

• Experience of vaccine rollout and policy response to COVID-19 vaccination in refugees and migrants

• Principles and key considerations

  1. Ensure universal and equal access to the COVID-19 vaccine for refugees and migrants regardless of migration status, with access the same as for nationals.

  2. Addressing barriers that prevent refugees and migrants from accessing COVID-19 vaccination services and international travel

  3. Promoting vaccine uptake and addressing vaccine hesitancy

  4. Engaging communities in COVID-19 vaccination planning and implementation and enhancing effective communication to build trust and counter misinformation

  5. Develop innovative approaches and vaccination strategies for refugees and migrants living in hard-to-reach area

Thank you
