A rapid self-assessment of digital health implementation in the

WHO South-East Asia Region

Digital Health Index a proxy indicator of digital health maturity

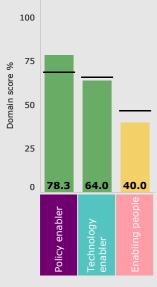

The country digital health index is computed by the sum of the three country domain scores. The regional digital health index is the average of the digital health indices of 11

Indonesia digital health index is 0.2 points more than the regional average

Three domains of digital health implementation

Indonesia varies between minimal to partial maturity across the three domains of digital health implementation

Average domain score% for WHO South-East Asia Region

Digital health implementation maturity level:

Assessment summary for

Indonesia

Policy enablers domain (Country domain score: 23.5 out of 30 (max.) = 78.3%) Indonesia has a comprehensive national digital health strategy, which is currently active and is being National digital health strategy (share of domain score: 12 of 30) (country score: 12.0 out of 12) Does your country have a national digital health strategy, which is currently active and A1 is being implemented? Is the national digital health strategy aligned with and designed to support the top A2 national priorities of the health sector, in line with the basic principles of digital health Has a dedicated organization been established for the design and implementation of АЗ digital health initiatives, aligned to the national digital health strategy? Has there been a concerted effort to sensitize the policy-makers on the expediency and Α4 benefits of investing time, effort and resources on digital health? Has the national digital health strategy been designed and developed after conducting Α5 a stakeholder analysis, with stakeholder engagement for identifying their needs and Governance structure (share of domain score: 9 of 30) (country score: 3.0 out of 9) Is there a multistakeholder national steering committee (or equivalent) which sets the 0 Α6 priorities, approves digital health initiatives and oversees the implementation? Have not Α7 How many times has the national steering committee met in the last one year? Is there a national working group(s) that develops detailed plans, frameworks and Α8 O guidelines for the implementation of digital health in general? Have not Α9 How many times has the national working group(s) met in the last one year? met Has the country prioritized national investments on digital health in support of primary A10 health care (PHC) and universal health coverage (UHC)? Has the country implemented management procedures for programmes, risks and A11 Legislation, policies and investments to enable and support the implementation of digital health (share of domain score: 9 of 30) (country score: 8.5 out of 9) A12.a Does the country have a data protection regulation? Does the country have a national health data management policy or its equivalent to A12.b enable data sharing while protecting the privacy of health data? Does the country have a policy or guidelines for promoting and regulating A12.c telemedicine? Does the country have a policy or guideline on the procurement of drugs and commodities, which has been updated in the last three years? Is the procurement of drugs and commodities done through an e-procurement A12.e platform? Sufficient How would you describe the adequacy of public investment to support the budget A13.a implementation of digital health initiatives? allocations Medium What is the level of private investment to support the implementation of digital health

A13.b

initiatives?
