

Indonesia

Population (000s) ¹	Urban population ²	Poverty ³	GDP per capita ⁴ (current US\$)	Current health expenditure as share of GDP ⁴
277 534	58.6%	(PPP <US\$ 2.15 a day) 2.5%	3894.3	3.4%

Monitoring the health SDG goal: Indicator of overall health and well-being

Life expectancy at birth⁵

Life expectancy at birth is the average number of years that a newborn is expected to live if s/he were to pass through life exposed to the sex- and age-specific death rates prevailing at the time of birth, for a specific year, in a given country, territory or geographical area.

Healthy life expectancy (HALE)⁵ at birth is the average number of years that a person can expect to live in 'full health' by taking into account years lived in less than full health due to disease and/or injury.

Compared to males, females have 3.9 years of longer life expectancy and 1.9 years of more HALE.

Universal health coverage (UHC): at the centre of health-related SDGs

The goal of UHC (SDG3 Target 3.8) is to ensure that every individual and community, irrespective of their circumstances, should receive the health services they need without risking financial hardship. To monitor Target 3.8, two indicators are regularly estimated: 3.8.1 which captures the population coverage dimension of UHC, and 3.8.2 which captures the financial protection dimension of UHC.

HEALTH SERVICE COVERAGE

The summary measure of essential health service coverage is the *service coverage index* of sub-indicators in four main areas:

- (1) reproductive, maternal, newborn and child health; (2) infectious diseases; (3) noncommunicable diseases; (4) service capacity, access and health security.

Reproductive, maternal, newborn and child health (RMNCAH)

Infectious diseases

Noncommunicable diseases

Service capacity, access and health security

UHC Service Coverage Index (UHC SCI) of essential health services

UHC SCI is a single indicator computed from tracer indicators of the coverage of essential services in the areas of RMNCAH, infectious disease control, NCDs and service capacity and access. Presented on a scale of 0 to 100 (full coverage), the index is constructed from geometric means of the tracer indicators; first, within each of the four categories, and then across the four category-specific means to obtain the final summary index.

UHC service coverage index

FINANCIAL PROTECTION

Financial protection in health occurs when families who get needed care do not suffer undue financial hardship as a result. The official SDG indicators for financial protection are:

- (1) Impoverishment due to out-of-pocket health spending, and
- (2) catastrophic out-of-pocket health expenditure.

Impoverishment: **0.4%** or **approximately 1 110 136** people are being pushed into poverty (at US\$ 2.15 level) because of out-of-pocket health spending³.

Catastrophic expenditure on health: **2%** of people spent more than 10% of their household's total expenditure (income or consumption) on health care³.

Out-of-pocket expenditure⁴

In most cases, a high percentage of out-of-pocket expenditure out of the current health expenditure is associated with low financial protection.

■ Out-of-pocket (OOPS) as % of current health expenditure (CHE)

Public spending on health⁴

Is determined by the capacity of the government to raise revenues and the level of priority it attaches to the health sector.

■ Gross domestic product (GDP)
■ General Government Expenditure (GGE) as % gross domestic product (GDP); Value for Indonesia = **18.6%**
■ Domestic general government health expenditure (GGHE-D) as percentage of general government expenditure (GGE) (%)*; Value for Indonesia = **10.1%**

This health and health-related SDG country profile is a tool for action. It supports each country to assess progress in population health and to identify opportunities to address intervention coverage gaps and accelerate progress in improving coverage and health outcomes. It also includes indicators to monitor WHO's Thirteenth General Programme of Work 2019–2025 (GPW13) Impact Framework programmatic targets.

SDG 3: Health targets

Maternal, neonatal and child mortality (SDG target 3.1, 3.2)

Infectious diseases (SDG target 3.3)

Noncommunicable diseases, substance abuse and road traffic injuries

Indicator	SDG target	Year	Indonesia	Regional estimate
Probability of dying between the ages of 30 and 70 years from cardiovascular diseases, cancer, diabetes or chronic respiratory diseases (%) ²⁰	3.4.1	2010	26.1	23.4
		2019	24.8	21.6
Suicide mortality rate (per 100 000 population) ²¹	3.4.2	2010	2.6	11.6
		2019	2.4	10.1
Alcohol per capita consumption (aged 15 years and older) within a calendar year (in litres of pure alcohol) ²²	3.5.2	2010	0.1	3.6
		2019	0.1	3.8
Death rate due to road traffic injuries (per 100 000 population) ²³	3.6.1	2010	13.7	17.6
		2019	11.3	15.8

Sexual and reproductive health

Proportion of women of reproductive age (15–49 years) who have their need for family planning satisfied with modern methods (%) ^{56, 61}	3.7.1	2003	77.1	–
		2017	77.1	–
Adolescent birth rate (per 1000 women age 10–14 years) ²⁴	3.7.2	2010	0.3	1.0
		2016	0.3	0.6
Adolescent birth rate (per 1000 women aged 15–19 years) ²⁴	3.7.2	2010	48.0	46.9
		2016	36.1	29.7

Mortality due to environment pollution

Age-standardized mortality rate attributed to household and ambient air pollution (per 100 000 population) ²⁵	3.9.1	–	–	–
		2019	96.1	132.8
Mortality rate attributed to exposure to unsafe water, sanitation and hygiene (WASH) services (per 100 000 population) ²⁶	3.9.2	2010	–	–
		2019	15.8	29.6
Mortality rate attributed to unintentional poisoning (per 100 000 population) ²⁷	3.9.3	2010	0.3	0.5
		2019	0.3	0.3

Tobacco use

Age-standardized prevalence of tobacco use among persons aged 15 years and older (%) ^{28, 29}	3.a.1	2010	36.3	37.6
		2020	37.6	29.0

Note: En dash (–) implies relevant data are not available

Indicator	SDG target	Year	Indonesia	Regional estimate
Essential medicines and vaccines				
Diphtheria–tetanus–pertussis (DTP3) immunization coverage among 1-year-olds (%) ⁷	3.b.1	2010	<div><div></div></div> 81.0	<div><div></div></div> 82.0
		2022	<div><div></div></div> 85.0	<div><div></div></div> 91.0
Measles-containing vaccine second-dose (MCV2) immunization coverage by the nationally recommended age (%) ⁷	3.b.1	2012	<div><div></div></div> 78.0	<div><div></div></div> 43.0
		2022	<div><div></div></div> 67.0	<div><div></div></div> 85.0
Pneumococcal conjugate 3rd dose (PCV3) immunization coverage among 1-year-olds (%) ³⁰	3.b.1	2018	<div><div></div></div> 0.0	<div><div></div></div> 17.0
		2022	<div><div></div></div> 6.0	<div><div></div></div> 58.0
Human papillomavirus (HPV) immunization coverage estimates among 15 year-old girls (%) ⁷	3.b.1	2020	<div><div></div></div> 3.0	<div><div></div></div> 0.0
		2022	<div><div></div></div> 6.0	<div><div></div></div> 2.0

10. *constant extrapolation*; UHC Global Monitoring Report 2023
- ***Non-elevated blood pressure**: *Proxy indicator*. Values have been rescaled for incorporation into the index calculations. Prevalence of non-raised blood pressure capped at minimum thresholds, corresponding to the maximum observed across all Member States. Prevalence of non-raised blood pressure: rescaled value = $(X-40)/(100-40)*100$
- ***Mean fasting plasma glucose**: *Proxy indicator*. Mean fasting plasma glucose, which is a continuous measure (units of mmol/L), is converted to a scale of 0 to 100 using the minimum theoretical biological risk (5.1 mmol/L) and observed maximum across countries (7.4 mmol/L). - Mean FPG: rescaled value = $(7.4 - \text{original value})/(7.4-5.1)*100$
- ***Tobacco non-use**: *Proxy indicator*. Values have been rescaled for incorporation into the index calculations. Prevalence of tobacco non-use are both capped at minimum thresholds, corresponding to the maximum observed across all Member States. Prevalence of tobacco non-use: rescaled value = $(X-30)/(100-30)*100$
- ***Health worker density**: *Proxy indicator*. Health workforce density are both capped at maximum thresholds, and values above this threshold are held constant at 100. These thresholds are based on minimum values observed across OECD countries.
 - physicians per 1,000: rescaled value = minimum(100, original value / 0.9*100)
 - psychiatrists per 100,000: rescaled value = minimum(100, original value / 1*100)
 - surgeons per 100,000: rescaled value = minimum(100, original value / 14*100)

53. Indonesia Health Profile, Ministry of Health
- ***Hospital bed density**: *Proxy indicator*. Hospital bed density is capped at maximum thresholds, and values above this threshold are held constant at 100. These thresholds are based on minimum values observed across OECD countries.
 - hospital beds per 10,000: rescaled value = minimum(100, original value / 18*100)
