FIELD OPERATION

- Preparation prior to field operation:
  - 1) Qualified human resources (knowledge and skill) should be selected as team leaders (leaderships).
  - 2) quality and quantity of equipment and materials, and
  - 3) enough and secure budget.
- Serial field operation:
  - Field and pilot tests,
  - First and Second visits,
  - and field operations.
- Process of field operation:
  - D0 for preparation and OJT,
  - D1 for census taking,
  - D2-D6 for screening and sputum transportation.
- Equipment and materials management:
  - Ensure that they are enough and work prior to field
DATA AND CASES MANAGEMENT

- Data management in field:
  - Numbering of participants,
  - Ordering of household lists and interview sheets family by family,
  - Ensure the number of participants, suspects by Interview, CXR, and Lab unit are the same before end-field operation.

- Data flows:
  - From the field via each section(CXR and Lab units)
  - Finally to data management room

- Case management:
  - Feedback the case to the site through team leaders
  - Follow-up the case by supervisory.
