Subnational estimates
Working Group
Created: 2018-05-04 Fri 07:50
1 What was discussed

- Limitations of subnational (case) targets
- Non-target uses
- What data are required
- IGRA surveys as a potential source of data
2 What was (dis)agreed

- There is demand & a need for support
- Robust & action-based subnational targets preferred
- Subnational (incidence) estimates should include uncertainty

Countries interested in subnational estimates should first:

- Develop an inventory of data, their level & biases
- Describe decisions affected, and potential perverse incentives
- Think twice w/o population, notification, mortality, prevalence
3 Next steps

- Guidance on uses of subnational estimates...
- & target setting (service focus & uncertainty)
- List of methods applied and data required
- Simulation & discussion illustrating pitfalls
