TOOLKIT

A large, stylized sunburst or starburst graphic in the background, with a thick yellow diagonal line crossing the frame. The sunburst has a central dark circle with a white outline, from which multiple rays of light in shades of blue, green, and yellow emanate, fanning out towards the top right corner.

# THIS REPORT

The World Health Organization Global TB Report provides a comprehensive and up-to-date assessment of the TB epidemic, and progress in the response, at global, regional and country levels.

The 2022 edition features data on disease trends and the response to the epidemic from 215 countries and areas, including all 194 World Health Organization (WHO) Member States. It provides a comprehensive and up-to-date assessment of the TB epidemic, progress in the response at global, regional and country levels, as well as on the impact of the COVID-19 pandemic on TB services.

TB remains one of the top infectious killers in the world. This year's report presents data on an increase in the number of people falling ill with TB and drug resistant TB for the first time in many years. Increases were also reported on the number of TB deaths, highlighting the severe impact of the COVID-19 pandemic and other crises on the TB response that has reversed years of progress.

It also presents the status of progress towards targets set at the first-ever United Nations General Assembly high-level meeting on TB in 2018 as well as the targets of the WHO End TB Strategy and the Sustainable Development Goals.

Additionally, the report outlines a monitoring framework that features data on SDG indicators that can be used to identify key influences on the TB epidemic at national level and inform the multisectoral actions required to end the TB epidemic.
