Abbreviated Biosketch for Proposed Members of the Guideline Development Group Group for developing recommendations for testing *P. knowlesi* and use of rapid antigen tests for detection of *P. malariae*, and *P. ovale*.

Title:	Associate Professor
First name:	Matthew
Last name:	Grigg
Current position:	Principal Research Fellow
Affiliation*:	Menzies School of Health Research and Charles Darwin University
Country:	Australia

Bio: I am a Principal Research Fellow (Associate Professor) in the Global and Tropical Health Division at Menzies School of Health Research in Darwin, Australia, where I currently hold a national Australian NHMRC Emerging Leadership II fellowship. I lead a program of work related to One Health surveillance methodologies across Malaysia and Indonesia, including the clinical, genetic and geospatial epidemiology of P. knowlesi malaria and other zoonotic species. I lead integrated studies on the human, mosquito and monkey surveillance for zoonotic malaria including development and validation of molecular and serological detection methods. My PhD was based in Sabah, Malaysia under the research supervision of Prof Nick Anstey at Menzies, and the clinical supervision and mentorship of Dr Timothy William. During my PhD I successfully established three research sites at district hospitals in Sabah, Malaysia and led a total of eight clinical trials involving P. knowlesi, P. falciparum and P. vivax malaria, and the first case-control study evaluating epidemiological risk factors associated with acquiring knowlesi malaria. I completed a Diploma in Tropical Medicine and Hygiene (Gorgas Course, University of Alabama, Lima, Peru) and also have a certificate in infectious disease 'omics from the London School of Hygiene and Tropical Medicine. I received an undergraduate bachelor of medicine and surgery degree from the University of Melbourne, and currently continue to work as a district medical officer in remote Indigenous communities in Australia.
