

PROGRAMME REVIEW WORKSHOP FOR MATERNAL, NEWBORN, CHILD AND ADOLESCENT HEALTH

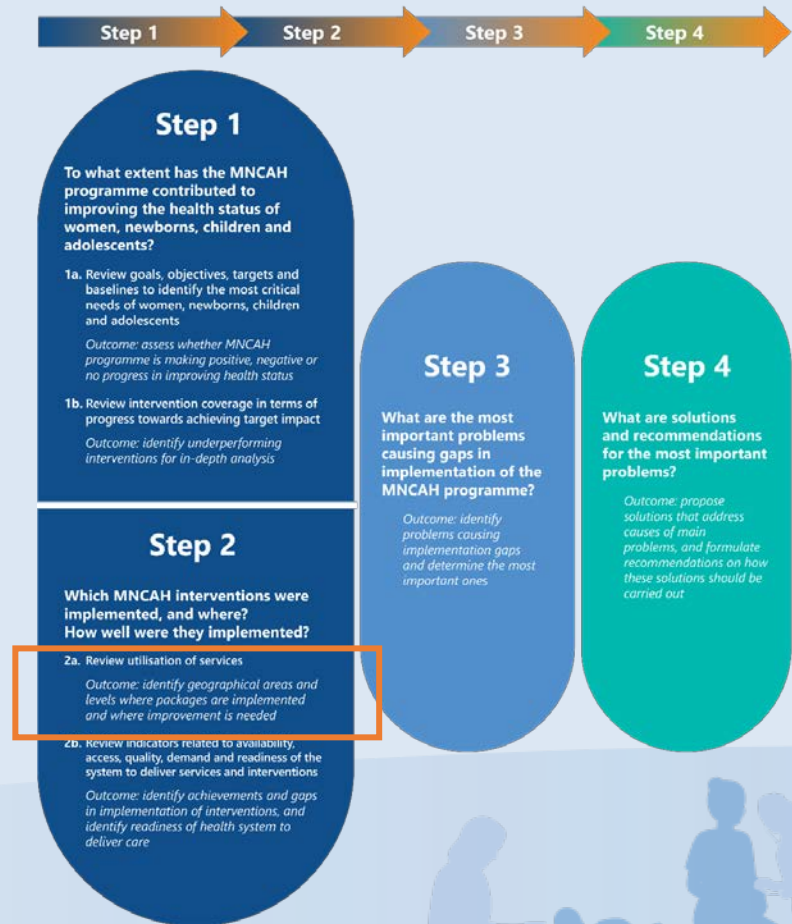

GROUP WORK
Step 2A

World Health
Organization

STEP 2A: Where are MNCAH interventions/packages implemented? Where is improvement needed?

- During Step 2A, we review the availability of interventions or packages across geographical areas and levels of the health system.
- The outcome of this step is to identify areas and levels where packages are implemented and where improvement is needed.

STEP 2A: Group work discussion questions

➤ Please consider the questions below and fill in information in the slides below. You may add additional slides if more space is needed.

- For each prioritized intervention/package (from Step 1B):
 - At what levels of the health system are the services provided? Are the services being provided at the lowest appropriate level of care?
 - In which areas of the country are the services being provided? Are there specific areas in which coverage of the interventions particularly poor?
- What are potential reasons for disparities in coverage of the intervention/package?

If the MNCAH programme review data tool (Excel) has been used for this workshop, you may wish to refer to the information/data summarized in the tool to help complete this step.

At what levels of the health system are the services provided? Is service being provided at the lowest appropriate level of health care?

Intervention / intervention package	Levels of health system services provided	Provided at lowest appropriate level of health care?

In which areas of the country are the services being provided? Are there specific areas in which coverage of the interventions particularly poor?

Service/intervention	Provided in all areas or selected areas (<i>specify</i>)?	Areas where coverage is particularly poor (<i>specify</i>)

What are potential reasons for disparities in coverage of the intervention package(s)?

Intervention / intervention package	Reasons for disparities in coverage
