

PROGRAMME REVIEW WORKSHOP FOR MATERNAL, NEWBORN, CHILD AND ADOLESCENT HEALTH

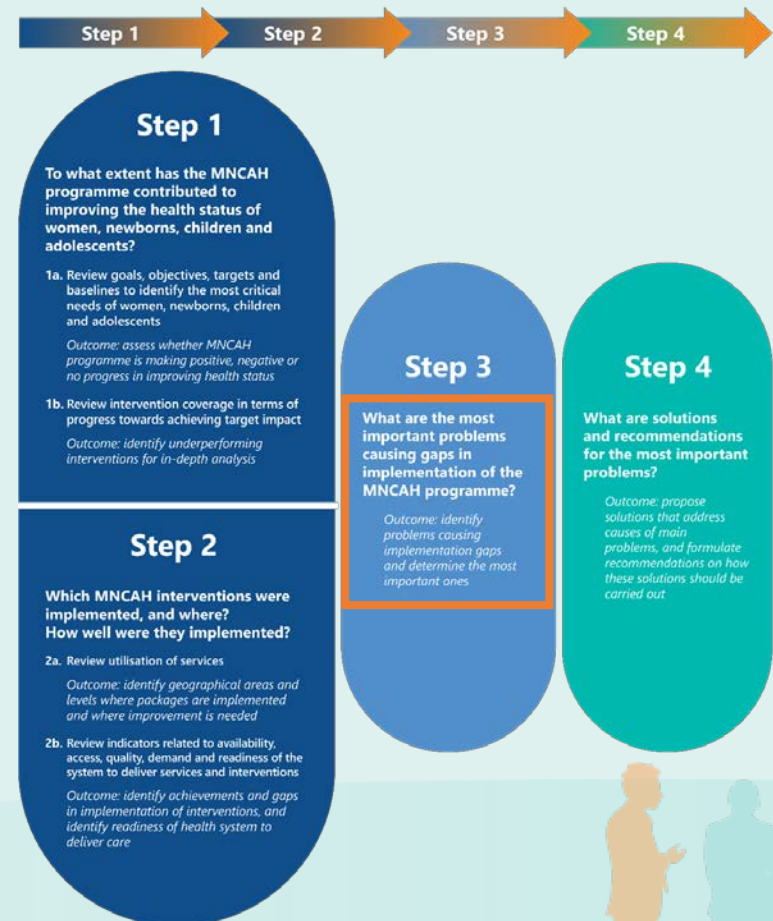

GROUP WORK Step 3

World Health
Organization

STEP 3: what are the most important problems causing gaps in implementation of MNCAH programmes?

- The outcome of Step 3 is to identify the most important problems causing implementation gaps. We will examine the gaps identified during the previous steps and suggest problems causing those gaps.
- After creating a list of problems, we will work together to choose the 3 to 5 most important problems causing gaps in implementation.

STEP 3: Group work discussion questions

- **Please consider the questions below and fill in information in the slides below. You may add additional slides if more space is needed.**
- What are the possible causes of gaps in implementation of the intervention packages?
- Of the possible problems causing these gaps, which are the most important?

STEP 3: Group work discussion questions

- **To identify the most important problems, consider elements such as:**
 - Does the problem occur across multiple interventions or packages, or is it limited to only one?
 - Does the problem occur throughout the country, or is it limited to some geographical areas?
 - Does the problem occur at multiple levels of the health system, or is it limited to one level?
 - Does the problem significantly reduce the effectiveness of the package?
 - Does the problem significantly reduce the demand for or use of the service by the target population?
 - Is a feasible solution available?

What are the possible causes of the gaps in implementation of the intervention packages? Of the possible problems causing these gaps, which are the most important?

Intervention / package	Gaps in implementation	Possible causes of gaps	Most important problems <i>(Prioritize 1-2 per package)</i>

What are the possible causes of the gaps in implementation of the intervention packages? Of the possible problems causing these gaps, which are the most important?
