

Brazil - Matto Grosso Do Sul (Ages 13-15)

Global Youth Tobacco Survey (GYTS)

FACT SHEET

The Brazil - Matto Grosso Do Sul GYTS includes data on prevalence of cigarette and other tobacco use as well as information on five determinants of tobacco use: access/availability and price, exposure to secondhand smoke (SHS), cessation, media and advertising, and school curriculum. These determinants are components Brazil - Matto Grosso Do Sul could include in a comprehensive tobacco control program.

The Brazil - Matto Grosso Do Sul GYTS was a school-based survey of students in 7th and 8th grade of elementary school and 1st grade of high school conducted in 2002.

A two-stage cluster sample design was used to produce representative data for Brazil - Matto Grosso Do Sul. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 100.0%, the class response rate was 100.0%, the student response rate was 86.0%, and the overall response rate was 86.0%. A total of 851 students aged 13-15 participated in the Brazil - Matto Grosso Do Sul GYTS.

Prevalence

39.4% of students had ever smoked cigarettes (Boy = 36.1%, Girl = 41.3%)
