HIGHLIGHTS

- Case load is increasing daily, especially the Kathmandu District of Bagmati Province, which is driving the national caseload
- Currently, home isolation represents over half of the active cases in the country
- Home quarantine and Isolation pose challenges in following up the clinical status
- Teams for case investigation and contact tracing; and arrangements for additional isolation, intensive care and ventilatory beds need to be ramped up rapidly in Kathmandu valley to manage the case surge
- Strategies to shield the vulnerable population - geriatric and with co-morbidities are needed
- Availability of beds lower in some COVID-19 hospitals due to increased case load
- The imminent festival season and the large volume of travel in and out of the Kathmandu valley needs special attention in terms of risk communication and safe public transport travel arrangements to mitigate the risk of spread of infection

NEPAL EPIDEMIOLOGICAL SITUATION

- As of 14 October 2020, 07:00 hours, (Week no. 42), a total 115357 COVID-19 cases were confirmed in the country through polymerase chain reaction (RT-PCR). All 7 provinces and 77 districts have reported one or more cases since beginning of the COVID-19 epidemic in Nepal.
- In the last 14 days, 39100 cases were reported which constitutes 33.9 % of total confirmed cases. Out of total 77 districts, 2 districts – Manang and Jajarkot did not report any COVID-19 cases in the last 14 days.
- All 7 provinces in the country are now having transmission as clusters of cases. Bagmati province is showing significant increase in 7-day rolling average case incidence and total 46197 cases have been reported (40% of total cases) so far.

SITUATION OVERVIEW

NEPAL
(Data as of 14 October 2020, 07:00:00 hours)
115357 confirmed cases
562 deaths
12,07,091 RT-PCR tests (As of 13 October 2020)

SOUTH-EAST ASIA REGION
(Data as of 10am CEST 11 October 2020)
79,11,036 confirmed cases
1,26,917 deaths

GLOBAL
(Data as of 10am CEST 11 October 2020)
3,71,09,851 confirmed cases
10,70,355 deaths
• Observed doubling time - 3 days doubling time in April which gradually lengthened to 6 days, 10 Days, 18 days and up to 49 days. The most recent national doubling time is 28 days, observed on 22 September as total 66631 cases were reported crossing 65536 mark of doubling case count.

• Total 74% (85438/115357) of total cases were reported from 3 provinces, namely- Province 2, Bagmati and Province-5. The Kathmandu valley area (Kathmandu, Bhaktapur, Lalitpur) in Bagmati province is experiencing high and steeply increasing case load with 40% of national total (46197/115357), and 84% of the provincial total (46197/54392).

• Overall, the gender distribution remains skewed towards males, who constitute 70% (80498/115357) of the confirmed cases. Amongst the males, 85% (68404/80498) are in the economically productive age group (15-54-years). However, this skewed sex and age distribution is changing in some of the provinces, especially in Bagmati province where relatively high proportion of females are getting infected (37% of total cases in the province). Nationally, in the last week the female proportion in total cases moved up by 1 percentage point.

• As of date, total 662 deaths have been reported. Out of 662 deaths (details of one death awaited), 470 (71%) were males and 192(29%) were females. Amongst the deaths, 458 persons (69%) had at least one or more known co-morbid conditions. All deaths occurred in the country between weeks 20 and 41. Although the overall case fatality ratio (CFR) across all ages is less than 1 per cent, it progressively increases with age beyond 65 years of age in the range of 4% to 11%.

**Sudur paschim (8499)**

---

*Note: The first case developed symptoms on 3 Jan 2020 in China and was confirmed on 23 Jan 2020 (not shown here). Reference dates used in order of preference as available — Date onset/Date of sample collection/Date of confirmation.*
Figure 2C: Cumulative case count of laboratory-confirmed COVID-19 by province (N = 115357) (Data updated on 14 October 2020 T07:00:00)

Note: The first case developed symptoms on 3 Jan 2020 in China and was confirmed on 23 Jan 2020 (not shown here). Reference dates used in order of preference as available – Date onset/Date of sample collection/Date of confirmation.

Figure 3: Municipalities (By domicile) with reported laboratory-confirmed COVID-19 cases and districts shaded by current transmission status (N = 115357) (Data updated on 14 October 2020 T07:00:00)

1 dot = 10 cases (dot placed randomly within municipal boundary)
A district is shaded if there is at least one case in any municipality within the district confirmed within the past 14 days.

The boundaries shown used in the maps in this document do not imply the expression of any opinion whatsoever on the part of the World Health Organization concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries.
Table 1: Summary of laboratory-confirmed COVID-19 cases, deaths and transmission by provinces. (N = 115357) (Data updated on 14 October 2020 T07:00:00)

¹ Date of the last case is the date of onset or date of sample collection or date of lab report based on information available.

* Case classification is based on WHO transmission classification

- No cases - provinces with no cases; Sporadic cases - provinces with one or more cases, imported or locally detected
- Cluster of cases - provinces experiencing cases, clustered in time, geographic location and by common exposures
- Community transmission - experiencing larger outbreaks of local transmission defined through an assessment of factors including, but not limited to: - Large numbers of cases not linkable to transmission chains
  - Large numbers of cases from sentinel lab surveillance
  - Multiple unrelated clusters in several areas of the country/territory/area

\[
\text{Case Fatality ratio (CFR, %) = \frac{Number\ of\ deaths\ from\ disease}{Number\ of\ confirmed\ cases\ of\ disease} \times 100}
\]

COVID-19 positive lab result is temporally associated with death; causal association under investigation.

PREPAREDNESS AND RESPONSE

What are the Government of Nepal (GoN) & the Ministry of Health & Population (MoHP) doing?

– Ministry of Health and Population has endorsed following guidelines:
  – Revised guideline on COVID-19 Dead body Management Guideline, 2020 [Link Here]
  – Validation Protocol For COVID-19 Diagnostic Items [Link Here]

– High level meetings have been held to discuss, decide on and implement needed actions to manage the surge in cases in Kathmandu valley and also mitigate the potential for transmission from the valley to other parts of Nepal due to the imminent festival related travel of people their home towns / villages for celebration

– High level political leaders, bureaucrats, health authorities and societal opinion leaders are providing risk communication messages to the public to ensure compliance to individual and collective public health measures

– Laboratory services – continued expansion and quality assurance
  – A total of 12,07,091 RT-PCR tests performed nationwide by 61 designated COVID-19 labs functional across the nation (As of 13 October 2020). The latest addition to the designated COVID-19 labs this week is as listed below; [Link Here]
    a. Nobel Medical College Teaching Hospital, Biratnagar, Province 1
    b. Neuro COVID Hospital, Biratnagar, Province 1
    c. Birat Medical College, Province 1

Situation Update #26 - Coronavirus Disease 2019 (COVID-19)
WHO Country Office for Nepal
Friday 16 October 2020
d. NMC Molecular and Clinical Genetic Laboratory, Jorpati, Bagmati Province  
e. Kamalbazar Municipality PCR Lab, Sudurpaschim Province

This week, six laboratories participated in the National Quality Assurance Program (NQAS) through retesting strategy (5 positives and five negatives samples). All of them passed the quality control. WHO consultants have been providing technical support to NPHL in NQAS.

**What is the WHO Country Office for Nepal doing?**

- WHO Nepal has provided technical assistance through WHO consultants for
  - validation of one newly established designated COVID-19 laboratory (Nepal Medical College, NMC, Kathmandu). The laboratory shared their 10 positive and 10 negatives samples which were validated at NPHL. WHO consultant supported in the validation, report preparation and dissemination. The results for the was found to be satisfactory.
  - Onsite assessment of designated COVID-19 laboratories in Lumbini Province. along with NPHL representatives.
  - Facilitated NPHL team in addressing the issues of automatic extraction machine along with result analysis. Frequently reviewed the SARS-CoV-2 real time PCR results and audited the process including result interpretation as part of the continuous laboratory quality improvement activities. Audit results were shared with the NPHL staff which helped them to do root cause analysis to address the non-conformities.
  - Support for training and orientation of the SARS-CoV-2 sero-surveillance study team organized by EDCD, NPHL, Center for Molecular Dynamics Nepal (CMDN), Centre for Health and Disease Studies-Nepal (CHDN) and WHO-Nepal from 7-9, October, 2020. WHO consultants and FMOs are also providing technical support in receiving and tracking the sero-surveillance sample received at NPHL.
- Two laboratory Experts from Global Outbreak Alert and Response Network (GOARN) along with NPHL representatives has completed the assessment of Provincial Public Health Laboratories in **Province 1**, and **Sudurpaschim** and the experts are currently visiting PPHL in **Province 2** and **Karnali**. Assessment reports awaited.
- WHO Country office for Nepal supported in Organizing the weekly online technical training session for COVID19 laboratories and facilitated a session on “**Experience Sharing -Pre-analytical issues in COVID-19 related samples**”. Participants from different laboratories discussed their challenges and the WHO consultant and NPHL resource person provided recommendations to address the challenges.
- WHO Technical Expertise & Training pillar has developed its first Evidence Brief for the WR, this will be produced on a twice weekly basis and shared by the WR with the Secretary.
- The concept on COVID-19 Health Care Worker (HCW) pilot project was shared with Epidemiology and Disease Control Division (EDCD) officials. The concept note has been shared with CSD and dialogue with CSD is pending.
• National Health Training Center (NHTC) has requested WHO for support to establish a pool of trainers & Training of Trainers (ToT) for management of critical care patient. ToT for Bagmati province is scheduled to take place from 20-22 October, 2020
• WHO has developed a curriculum database in collaboration with NHTC.
• Weekly Disability Inclusion and Rehabilitation (DIR) Sub-cluster meeting and reporting to health & nutrition of Gandaki province.
• WHO is looking to expand support to the MoHP to scale up disability inclusion and rehabilitation initiatives – ‘virtual help desk’ and ‘telerehabilitation’ - at the federal level.
• WHO is working closely with NHTC & Management Division to increase the IPC health care waste management to all level health care facilities.
• The Government of Nepal, Epidemiology and Disease Control Division (EDCD) plans to conduct a nationwide seroprevalence survey to determine the prevalence of SARS-CoV-2 infection in the community in Nepal with support from WHO Nepal.
• Costed proposal received from UNOPS for the establishment of MoHP & WHO endorsed temporary and semi-permanent health desks at PoEs; OSL pillar lead verifying requirements through site visits
• Additional facilities to conduct health screening at the international airport are being prepared based on the request of the MoHP to ensure adequate physical distancing
• WHO Media monitoring output shared every day with MoHP spokesperson, HEOC officials, as well as EDPs and other partners
• Media coverage of newly appointed WHO Representative to Nepal presenting Letter of Credence to the Honorable Minister of Foreign Affairs
• Swasthya Khabar Patrika Video: What are the similarities and differences between COVID-19 and influenza? (Dr. Jos Vandelaer quoted): Link | October 12

- Audio assets released by WHO, Country Office for Nepal- WHE, about Mental Health in the context also of COVID19 in Nepali language to celebrate World Mental Health Day on 10 October 2020

- Ongoing COVID-19 messages for video content production in line with Strategic communication plan to support MoHP from political leaders and eminent social influencers
for preventive measures for celebration of upcoming National festivals (Dashain, Tihar and Chhath).

- The United Nation Office for Project Services (UNOPS) team have visited 6 out of 10 proposed sites for Point of Entry (POE). The 6 sites are: Morang, Gaur, Rautahat, Birgunj, Kanchanpur and Kailali Districts. The initial visit showed that municipalities are not clear about the sites and location of POE. This visit also showed considerable filling has to be done in the ground so as to avoid flooding due to rain.

- Based on the visit UNOPS team provided the evaluation cost for building the POE. A meeting with UNOPS team was held to discuss on the costing for the POE. No finalization has been done yet on structure to be built in the POE.

- WHO Nepal received official letter from the MoHP to support to build temporary Health Desk at Tribhuwan International Airport along with provision of operational support for human resources. WHO-Nepal team to visit the site and conduct an assessment (size of the area, number of tents required etc) of the site.

What are the health cluster partners doing?

- Health Cluster partners and its sub-clusters (Sexual & Reproductive Health and Mental Health) are robustly supporting for the continuation of COVID-19 response interventions and non-COVID-19 essential health services throughout the country.
- Partners have extended their support for the continuation of COVID-19 response and essential health care services in their respective geographical areas.
- Partners have also provided COVID response commodities to Management Division including 6 PCR machines and 6 Fully Automated RNA extraction machines, 100 Oxygen concentrators and 50 Pulse oximeters, Gown, Sanitizer, Cidex etc.
- Cluster coordination meeting for health sector response are ongoing at the Federal and Provincial levels for coherent actions at all levels.
