

15 years of Pandemic Influenza Preparedness Framework Implementation

World Health
Organization

Framework

PIP Framework

15 years of strengthening pandemic influenza
preparedness for a more equitable response

The Pandemic Influenza Preparedness (PIP) Framework

The PIP Framework is an **international instrument** that establishes **an access and benefit sharing system** to help prepare the world to respond more equitably to the next influenza pandemic.

Why was it created?

The PIP Framework is a partnership that brings together:

It has **two equally important objectives**:

Virus sharing

Strengthen Global Influenza Surveillance and Response System (**GISRS**) through timely sharing of influenza viruses with pandemic potential (**IVPP**)

Benefit sharing

Increase equity of access to pandemic response measures such as vaccines

The PIP Framework: Key milestones

15 years of PIP Framework Implementation

For 15 years, the PIP Framework has been **moving the needle on global preparedness** to detect and respond to an influenza pandemic.

Key achievements

Number of Member States (MS)

+25 new national influenza centres (NICs)
in 135 MS

Now 157
NICs in total

34 influenza-related courses on OpenWHO
from 194 MS**

189 597+
users

25M
syringes secured

940M
doses of pandemic influenza vaccines secured*

5M
antiviral treatment courses secured

250 000
diagnostic kits secured

9 000+
influenza viruses shared

\$350M+
collected

100+

SMTA2s signed

Drivers of equitable pandemic preparedness and response

Global leadership and coordination

Globally coordinated pandemic influenza response due to robust, tested and collaborative plans and networks

Robust surveillance systems

Robust and comprehensive surveillance systems enabling a fast, coordinated, and effective pandemic influenza response

Timely licensing and deployment of pandemic products

Fast, safe, and efficient licensing and deployment of pandemic products by countries

Communities ready to respond

Communities prepared to respond efficiently and effectively to an influenza pandemic

Equitable access to pandemic products

Timely and equitable access to effective pandemic response products, including diagnostics, therapeutics and vaccines, available to all countries based on need, regardless of income status

Enabling policies

Effective and efficient decision making and implementation due to pre-established policies and plans at a global and national level

The capacities developed support broader pandemic preparedness, delivering benefits beyond influenza and contributing to overall country and health system strengthening

All numbers are as of December 2025, unless specified.
