

## 2026 report on EMF Activities in Denmark

### Research activities related to EMF

The Danish Health Authority (SST) does not conduct studies, measurements or research on EMF or non-ionizing radiation in general. To our knowledge, no new EMF-related research has been carried out in Denmark since the last report.

### Policies and legislation

The responsibility for regulation regarding public radiofrequency EMF exposure lies with the Agency for Digital Government (DIGST). Product safety and conformance to limit values (e.g., for cell phones) is regulated by the Danish Safety Technology Authority (SIK), which is now part of the Danish Business Authority (ERST). Work Environment in Denmark (AT) is the responsible authority for regulating EMF exposure of workers.

The responsibility for health risk assessment of EMF exposures lies with SST. SST follows recommendations from WHO and EU. SST also works closely with the radiation protection authorities in the other Nordic countries, and the cooperation is formalized in the so-called Nordic-NIR group which meets once every second year.

### Communication

SST answers citizen inquiries and health-related questions from the Ministry of Health and other public authorities. SST provides information related to exposures and health issues on its website, [www.sst.dk](http://www.sst.dk). The number of enquiries is summarized in the annual reports of the authority.

Public concern primarily regards the location of base stations, electrohypersensitivity and low-frequency magnetic fields. Since 5G were rolled out in the 700 MHz and 3,5 GHz pioneer bands in 2019-2021, public concern seems to have waned on this specific matter. However, any plans on rollout in the 26 GHz band will require a thorough risk assessment and risk communication effort to meet public concern.

SST has annual meetings with DIGST to exchange knowledge and to ensure sufficient information to the public concerning EMF exposures from telecommunications. SST also has annual meetings with the Magnetic Field Committee of the Electricity Industry regarding risk assessment and communication when planning new high-voltage installations and facilities. In this regard, SST has assisted the Magnetic Field Committee in reviewing an updated version of an evidence summary report performed by the Danish consultant group COWI as well as reviewing an updated guidance on applying the precautionary approach.
