

Epidemiological Highlights

Week 44 (1-7 Nov 2021)

World Health
Organization

Highlights: COVID-19

As of week 44, (1-7 Nov 2021) there are 3,250 confirmed cases of COVID-19 (SARS-CoV-2), out of 72,688 samples that have been tested. The cumulative test positivity rate (TPR) now stands 4.5%

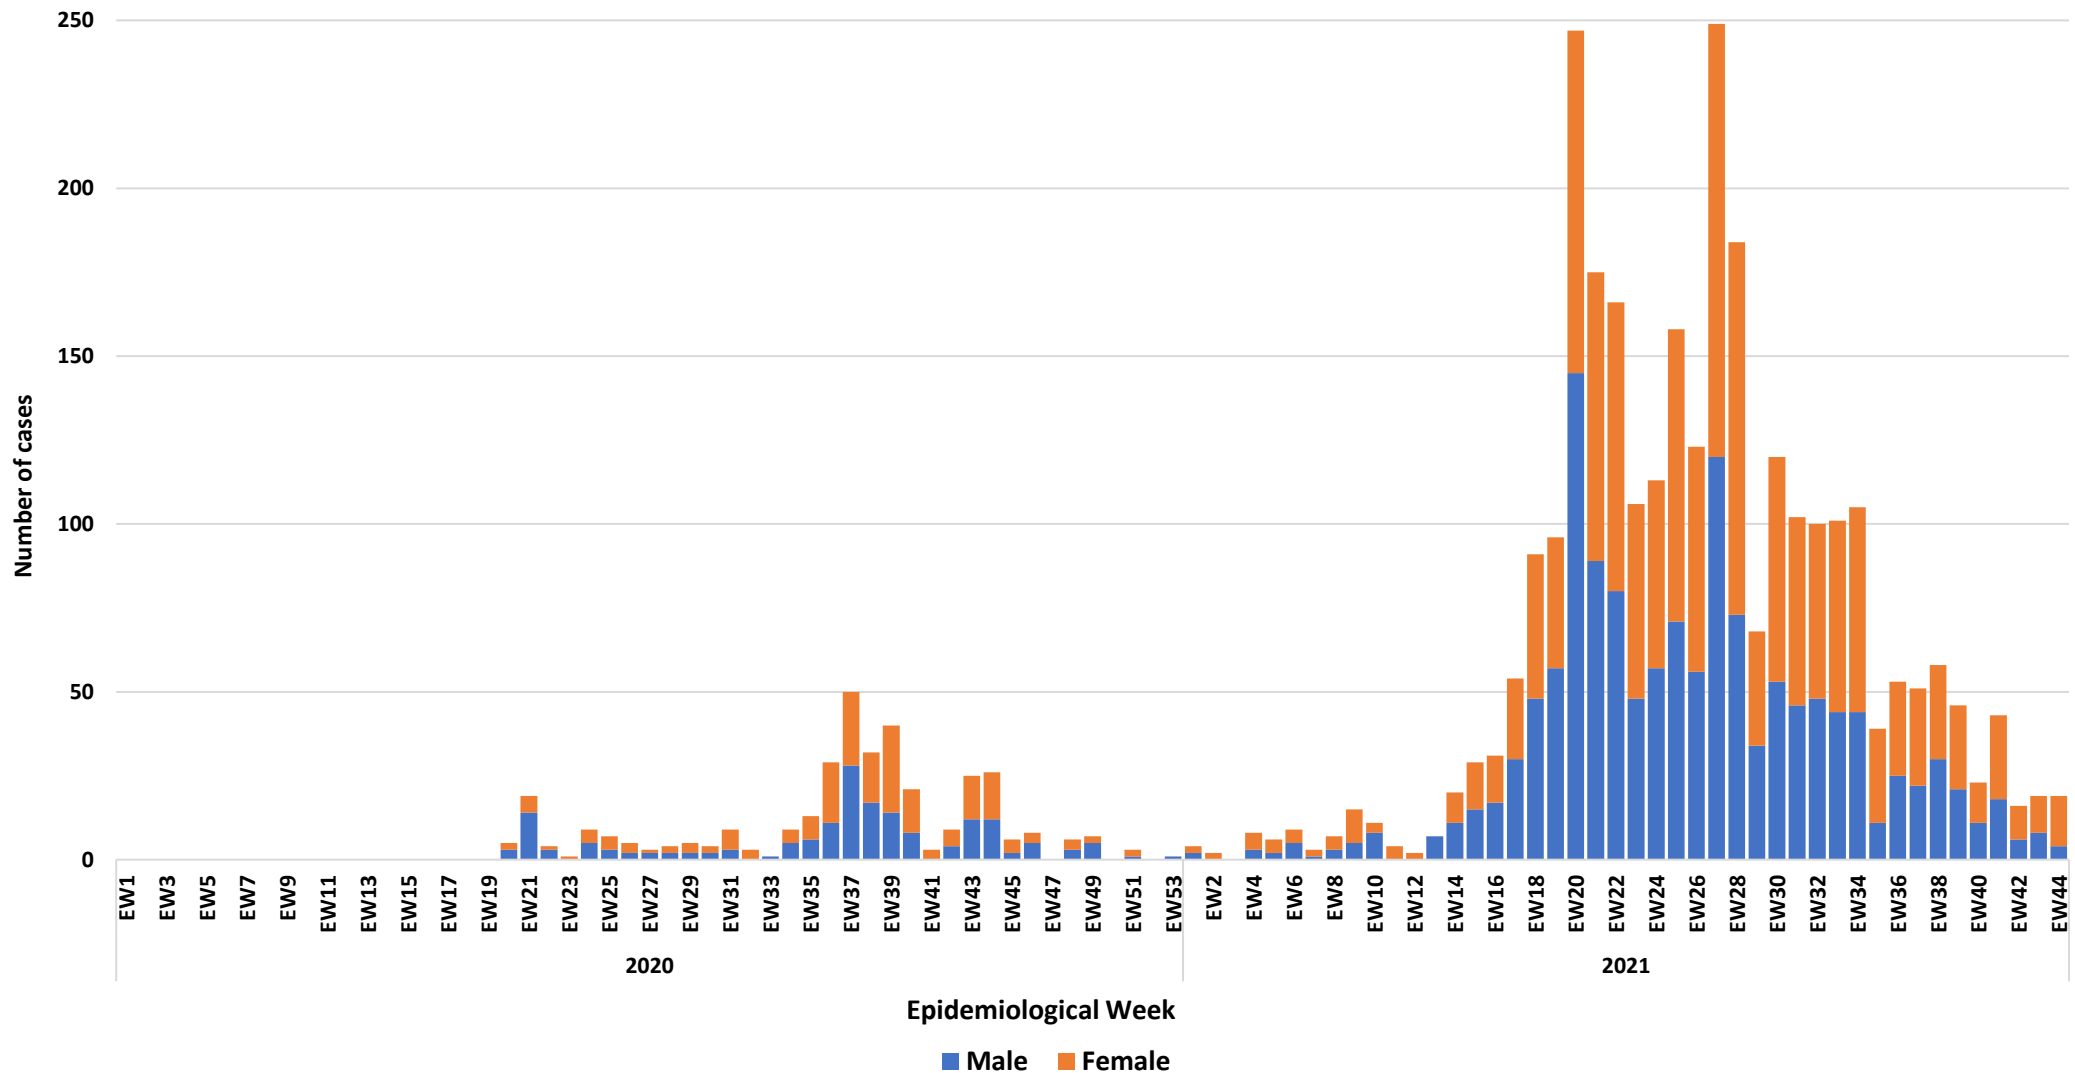

In the reporting week, 19 new confirmed cases were detected out of 1,112 total samples that were tested. This translates to a 1.7% weekly test positivity rate.

As of this week (week 44)

- Median ages of tested and confirmed cases are 11 (0-120) and 21 (0-100) years respectively
- By Gender, the number of female cases tested and confirmed cases are 53% and 53% respectively
- All 34/34 camps have reported confirmed cases (C24-203, C3-200, C2W-178, C17-177, and C21-173)
- The total confirmed COVID-19 deaths since the commencement of the outbreak remains static at 34 since there was zero death reported since Epi week 37, this translates to 1.0% in cumulative case fatality ratio
- The seven(7) days incidence remained static at 22.1/1million populations for the past two weeks now

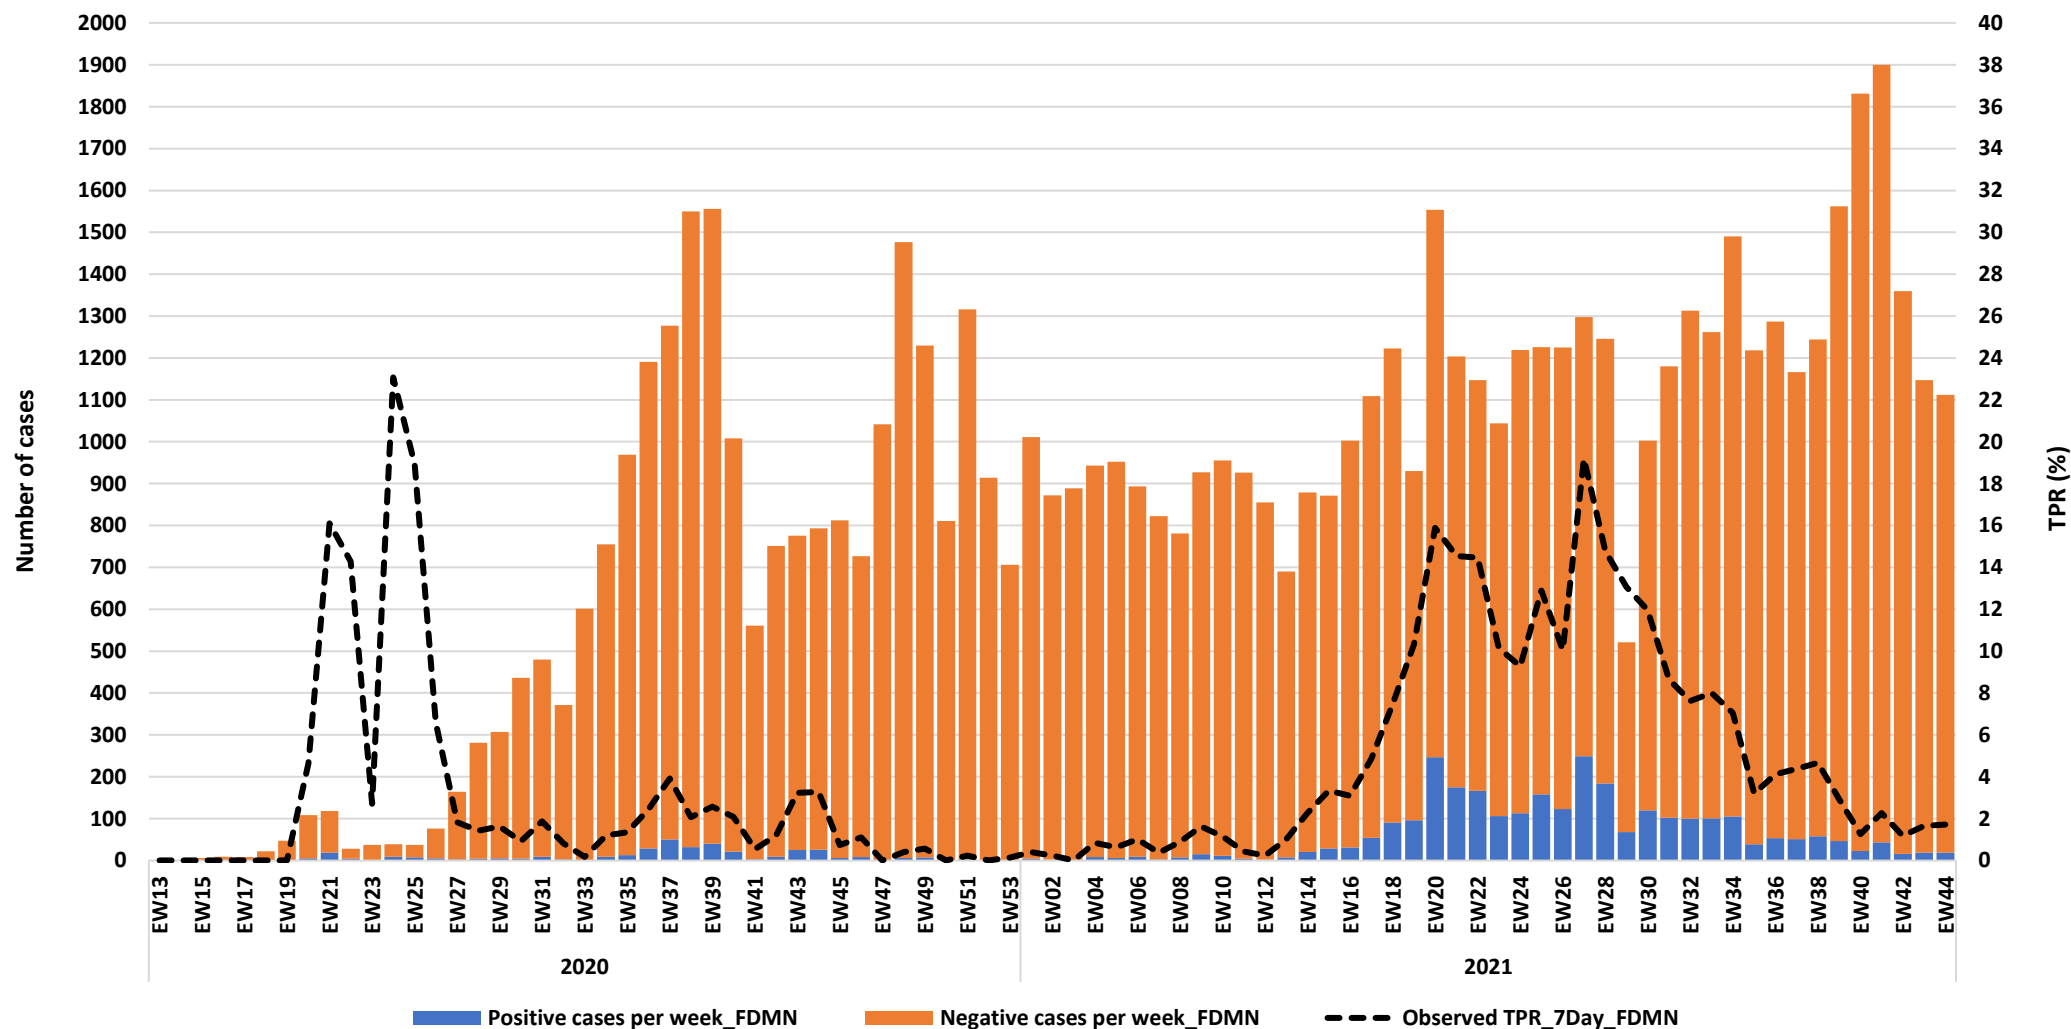

Highlights: COVID-19

COVID-19 positive cases (n=3,250) by epidemiological week by date of test

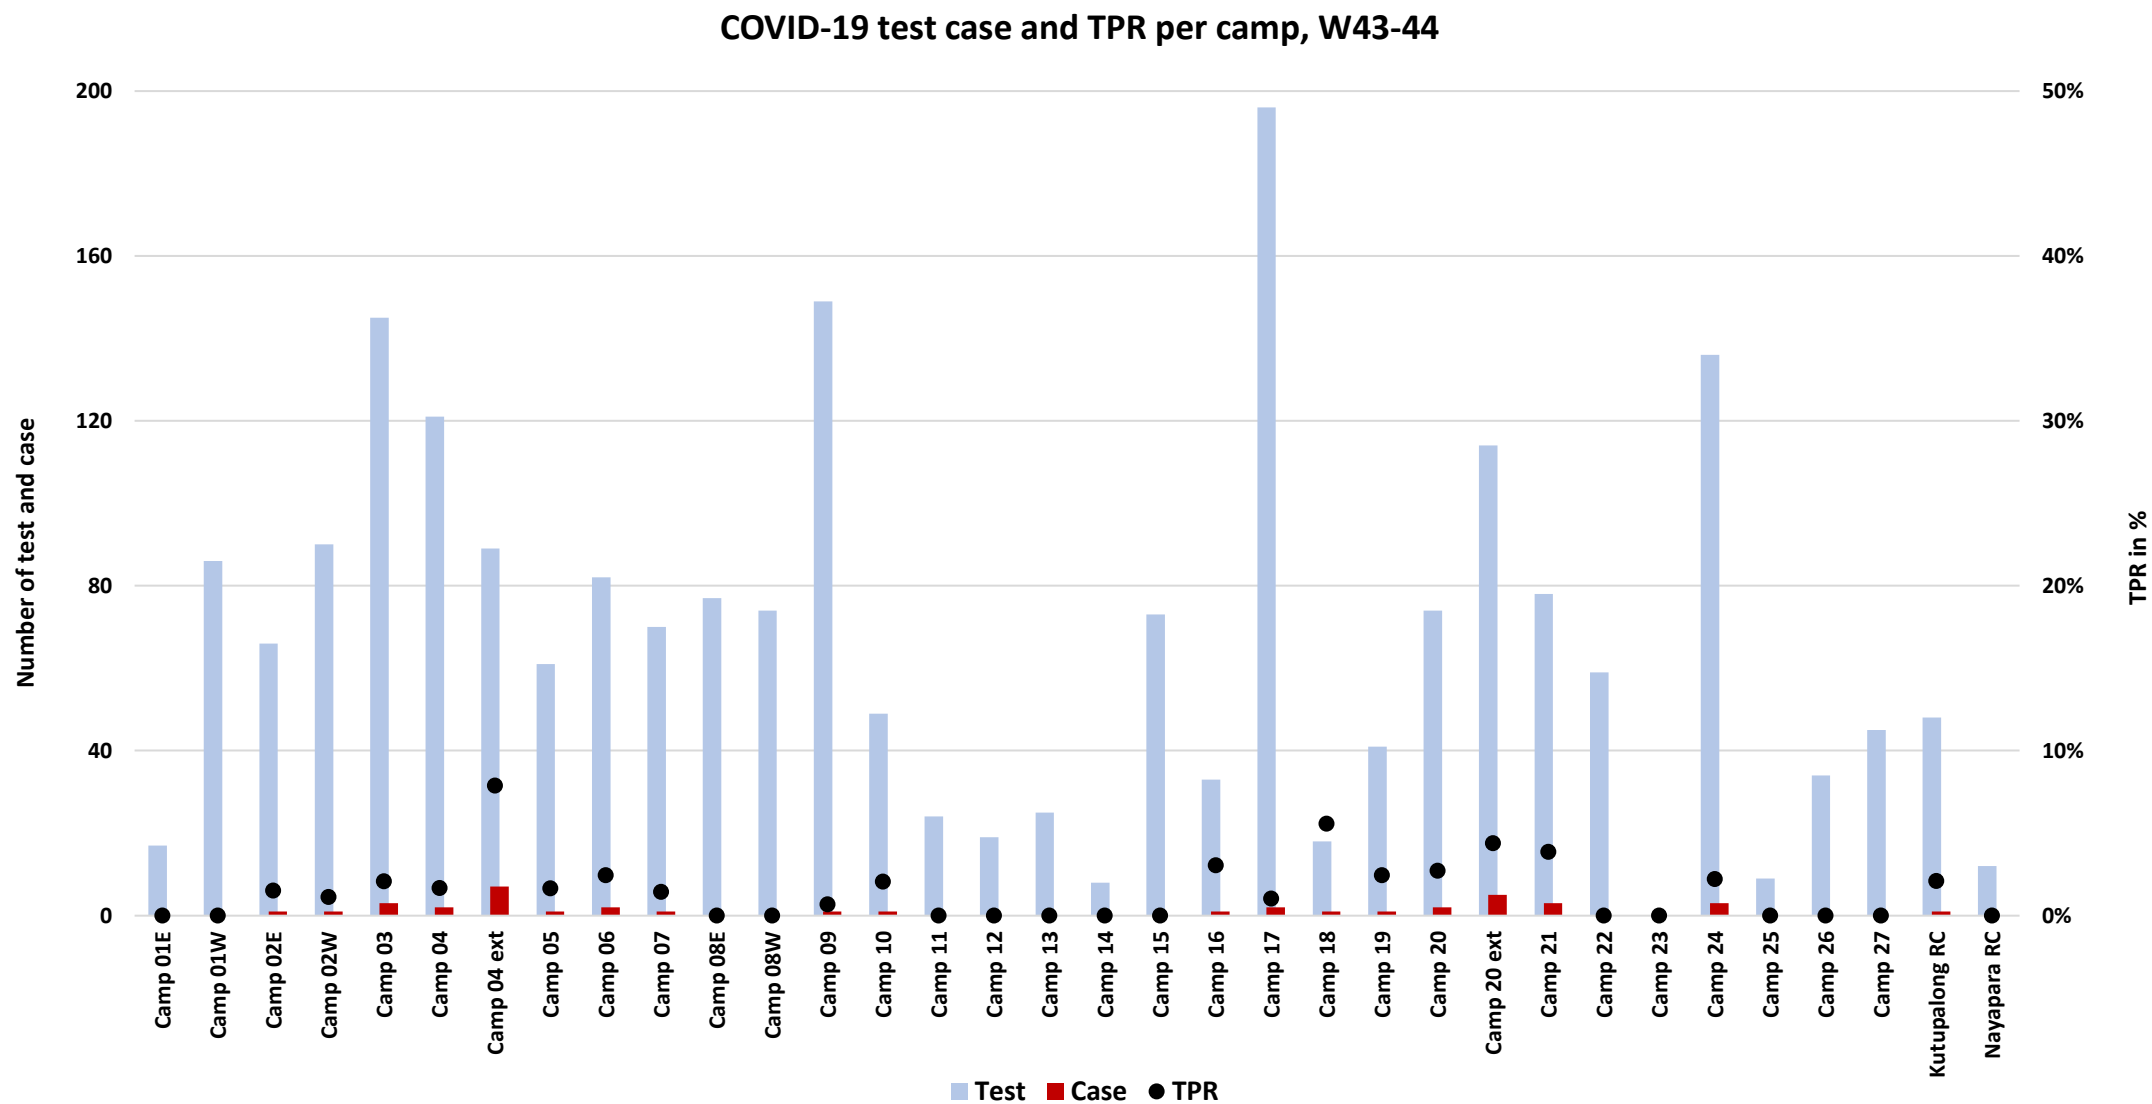

Highlights: COVID-19

Death reported by age and sex (%) (n=34)

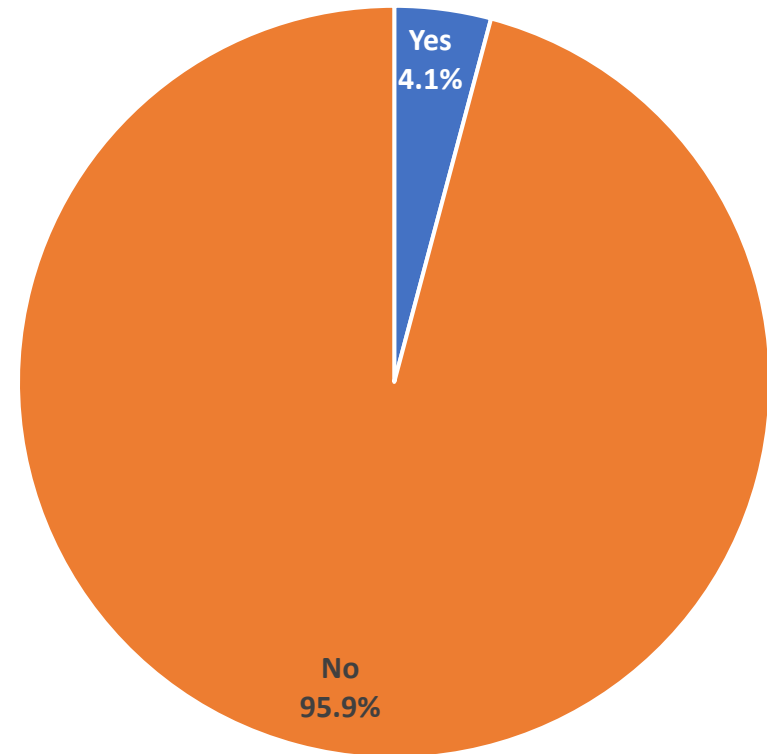

Highlights: COVID-19

Severity of reported cases at presentation (n=3,040)

Did the case report at least 1 co-morbidity (n=3,040)

Source: Go.Data

Highlights: COVID-19

- Total **3,040** (out of **3,250**) confirmed cases have been investigated by Rapid Investigation and Response Team (*RIRT, a camp wise CT network, composed of RIRT coordinator, Site Mx representation, CT supervisor, currently camp 34 teams are working with 34 supervisors and over 300 volunteers i.e. contact tracer*).
- Contact tracing has been done by CT supervisors with **7,844** contacts registered for follow up in the Go.Data out of 11,007 contacts in total identified during field investigation.
- 5,154 (66%) contacts successfully accomplished the follow up.
- **320** household contacts tested positive within the incubation period.

Source: Go.Data

EWARS Reporting Updates

- Currently, a total of 170 health facilities registered in EWARS
 - Only 91%(154/170) of registered health facilities submitted timely weekly reports in week 44
 - Timeliness of reporting for this week is 91%
 - Sixty-five (65) alerts were triggered
 - All alerts were reviewed and verified by WHO the EWARS team, the number is less than that of the previous week (72 in week 43).

Highlights:

- Acute Respiratory Infection (14.7%), Diarrheal Diseases (4.5%) & Injury and wounds (2.4%) are the diseases and health conditions with the highest proportional morbidity in week 44.
- Monitoring of suspected SARI death under enhanced Community-based mortality surveillance has been continued since week 28, 2020.
 - One hundred and twenty-seven (127) suspected SARI deaths have been reported so far and reviewed subsequently by Rapid Investigation and Response Team (RIRT) for COVID-19.
 - In total, fifteen (15) SARI deaths have been considered as probable COVID-19 dear to date.

Diphtheria

Two (2) confirmed and 7 suspected diphtheria case was reported in go.data in Epi week 44

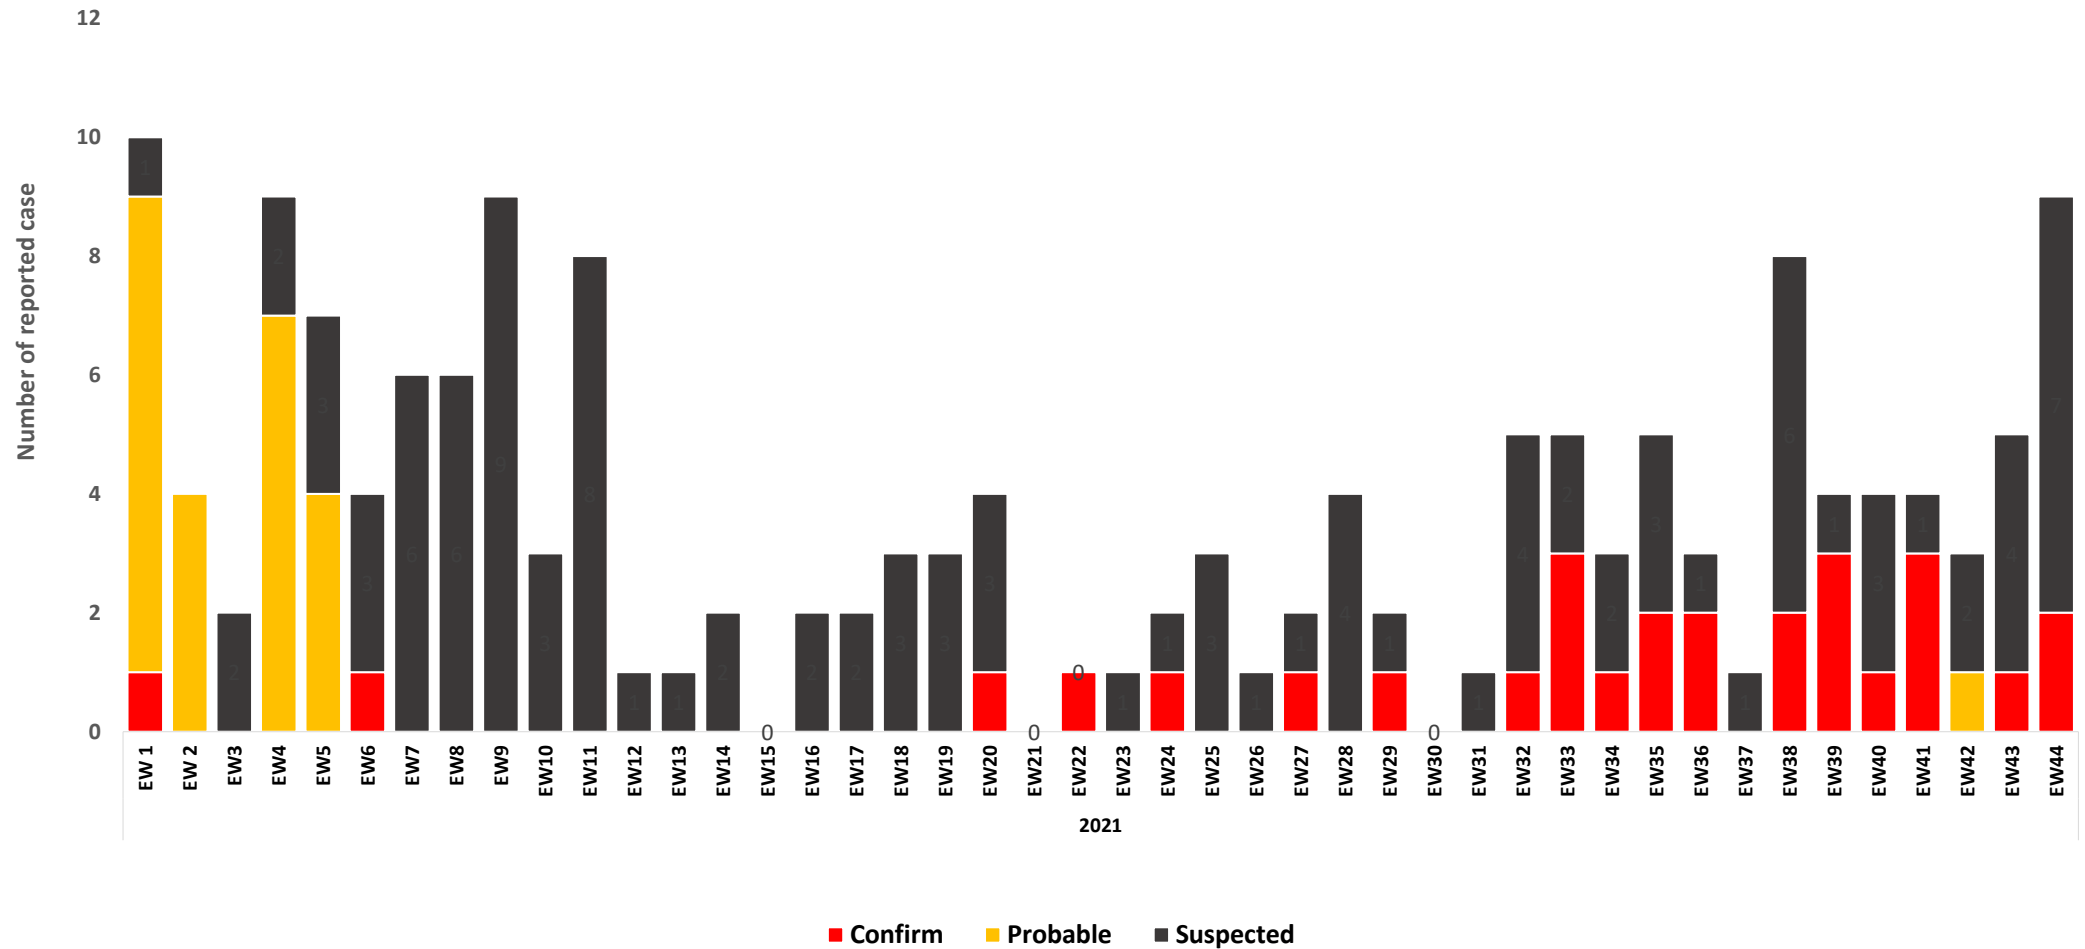

The last confirmed case was reported on 31 October 2021

A total of five (5) deaths have so far been reported, the last death reported on 5 November 2021

Classification	2017	2018	2019	2020	2021
Confirmed	66	226	31	19	28
Probable	1154	1555	60	9	26
Suspected	1796	3549	523	198	110
Death	30	14	3	0	5

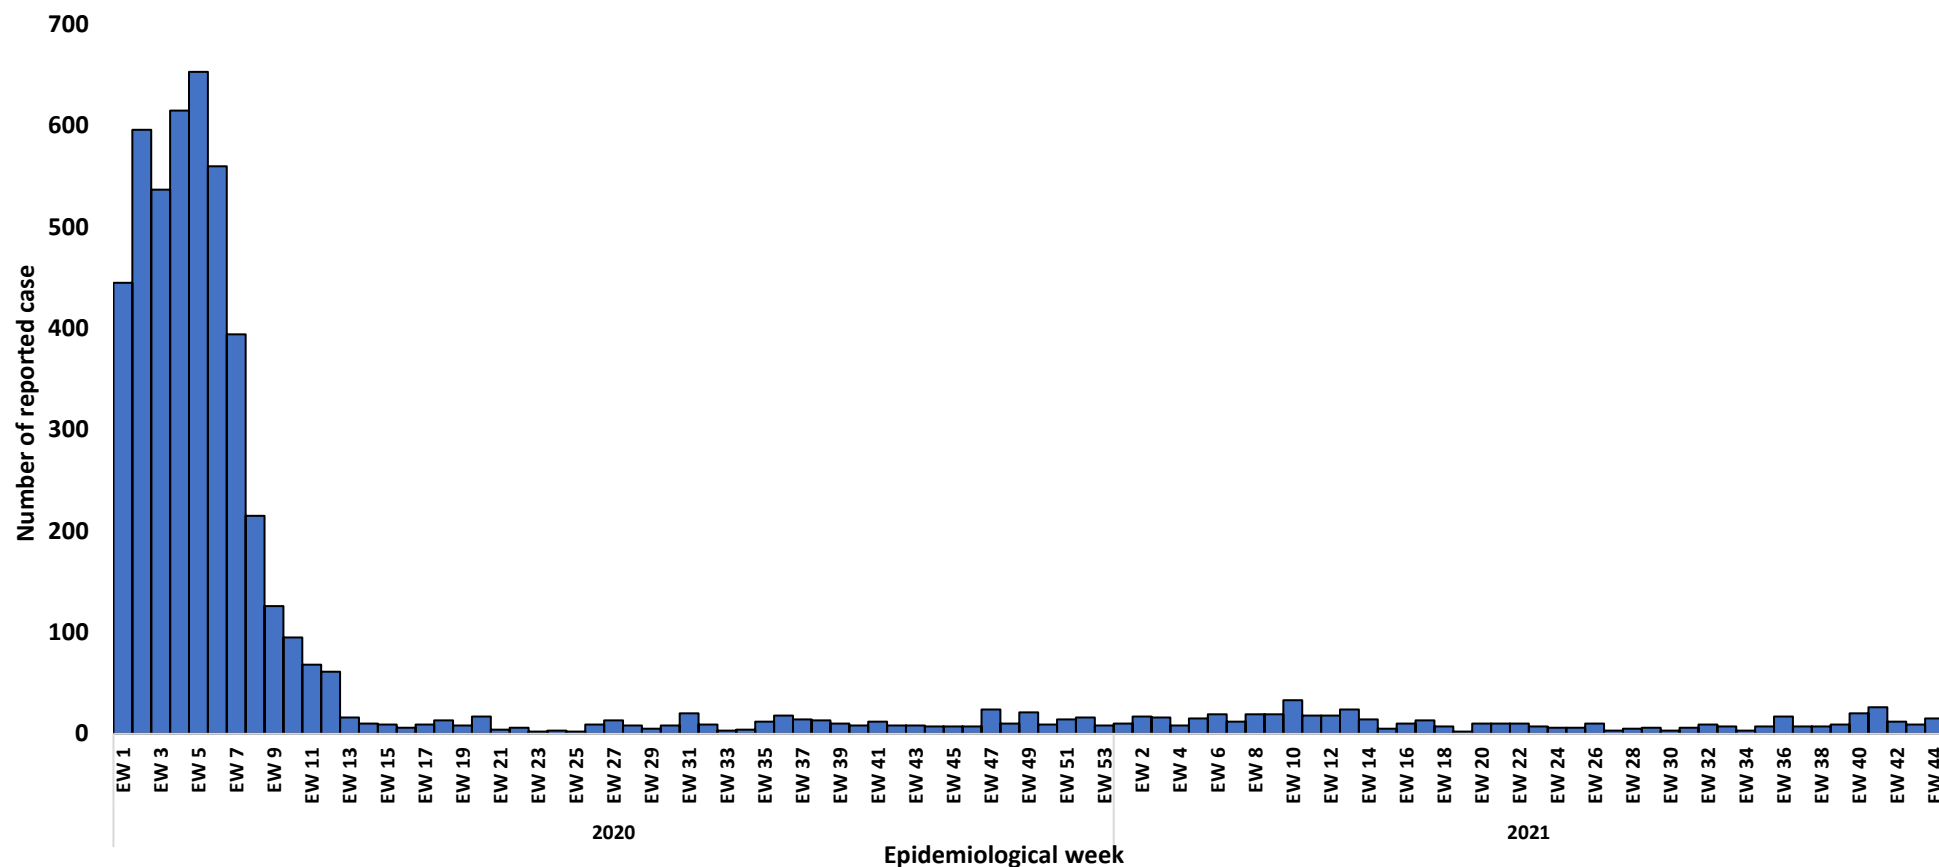

Diphtheria

Total number of diphtheria case reported in EWARS from W1-44, 2021

Measles

Number of Measles cases reported in EWARS by Epi week in 2021 as of week 44

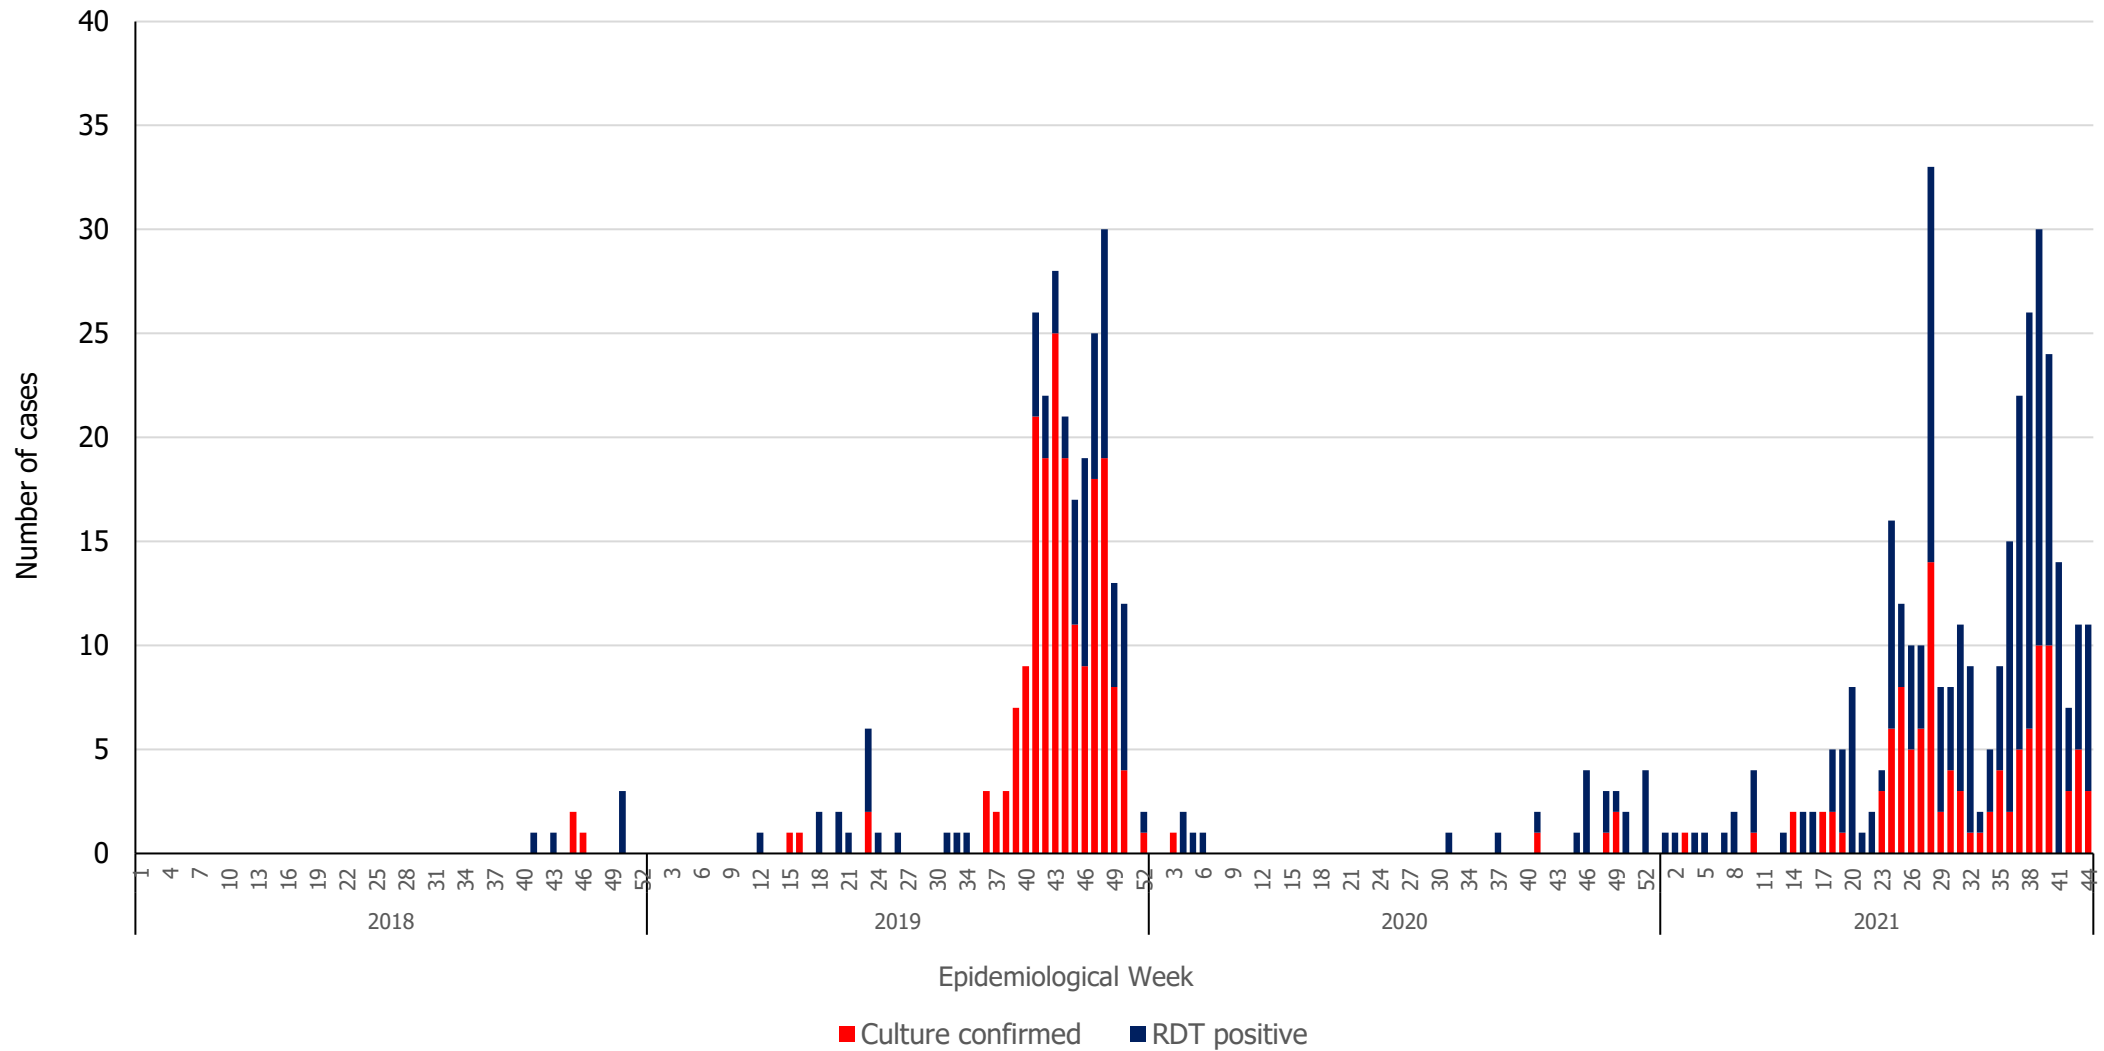

In week 44, 15 suspected measles cases were reported through weekly reporting which brings the total suspected cases to 509 in 2021.

About 67%(340/509) of the reported cases were done through case-based reporting and samples collected for laboratory confirmation

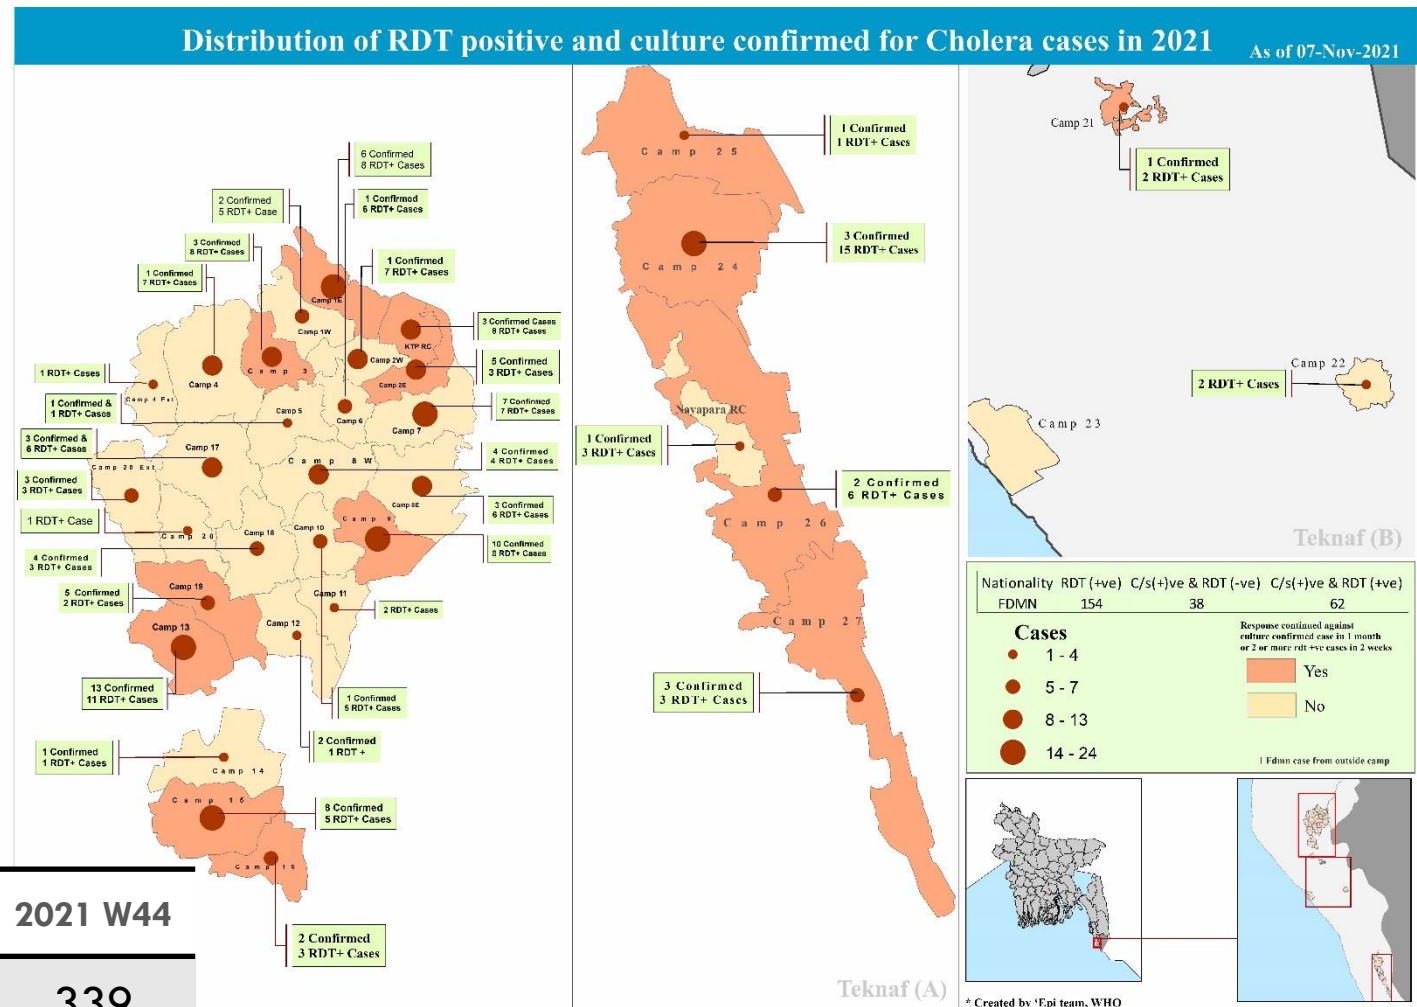

Cholera Surveillance

RDT positive & culture confirmed cholera cases, 2018-2021

Cholera Surveillance

- Total three hundred and thirty-nine (339) Cholera RDT positive/culture cases reported as of W44 2021. Out of these, 135 were confirmed by culture, 204 were RDT positive cases.
- In 2020, a total of 28 RDT/Culture positive cases for Cholera were detected through sentinel testing. Specifically, 5 became confirmed by culture – 2 from Ukhiya Host, 1 from Teknaf host, and 2 from Refugees.

2018 2019 2020 2021 W44

RDT positive/culture confirmed for Cholera 49 258 28 339

Culture confirmed for Cholera 7 184 5* 135

*3 culture confirmed cases were RDT negative in 2020

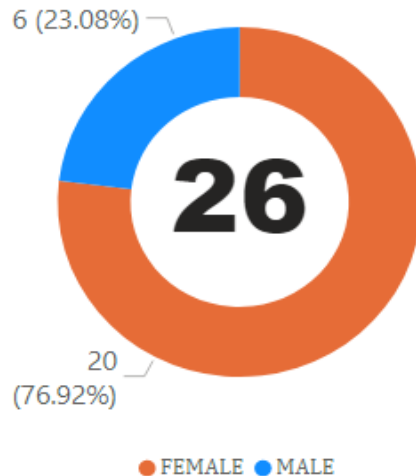

Community-based Mortality surveillance

Probable Cause of Death	Week 44	Year- 2021
Still Birth	2 (8%)	222 (12%)
Neonatal Death (<28 days old)	1 (4%)	183 (10%)
Infectious Disease	1 (4%)	44 (2%)
Severe Acute Respiratory Infection (SARI)	--	39 (2%)
Injury	--	34 (2%)
Maternal Death	1 (4%)	52 (3%)
Other	21 (81%)	1 209 (68%)
Total	26(100%)	1783(100%)

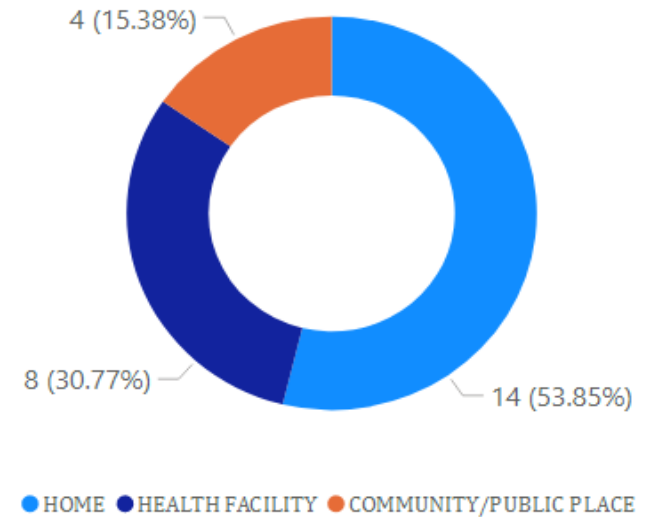

- Partners to report all mortalities into EWARS platform using both case and event-based reporting as applicable.

Notes

WHO and the Ministry of Health and Family Welfare gratefully acknowledge all partners who have reported the data used in this bulletin.

The data been collected with support from the EWARS project. This is an initiative to strengthen early warning, alert and response in emergencies. It includes an online, desktop and mobile application that can be rapidly configured and deployed in the field. It is designed with frontline users in mind, and built to work in difficult and remote operating environments. This bulletin has been automatically published from the EWARS application.

Notes

WHO and the Ministry of Health and Family Welfare gratefully acknowledge all partners who have reported the data used in this bulletin.

The data been collected with support from the EWARS project. This is an initiative to strengthen early warning, alert and response in emergencies. It includes an online, desktop and mobile application that can be rapidly configured and deployed in the field. It is designed with frontline users in mind, and built to work in difficult and remote operating environments. This bulletin has been automatically published from the EWARS application.

More information can be found at <http://ewars-project.org>
