

Telemedicine in Action: Transforming healthcare for LMICs

Choosing a Telemedicine Software: The case for standards-compliant, interoperable & open-source Digital Public Goods (DPGs)

August 7th, 2025, 14.00 IST

Context: One of the most important aspects of a telemedicine program is selecting the right software. Health system leaders have a choice between “build or buy”, as well as a choice of multiple software products. This webinar will introduce healthcare policymakers and professionals to the concept of Digital Public Goods (DPGs) in the context of telemedicine software. DPGs are open-source tools designed to improve global health equity by offering accessible, customizable, and interoperable digital health solutions.

Objectives: The session will focus on existing DPG telemedicine platforms, their use cases, and the benefits of adopting non-proprietary, community-driven solutions to enhance healthcare delivery, particularly in resource-constrained settings.

Expected Outcomes: By the end of the webinar, participants will:

- Gain a clear understanding of Digital Public Goods and their role in enhancing global health systems.
- Learn about leading DPG telemedicine platforms and their real-world applications in improving healthcare access and quality.
- Understand the steps needed to implement, scale, and sustain telemedicine DPGs in diverse settings.
- Understand the cost of implementing DPGs and how opensource does not mean “free”
- Take away actionable insights on how healthcare systems can benefit from adopting open-source telemedicine platforms for greater accessibility and efficiency.

LIST OF SPEAKERS

Mr. Carl Fourie

Digital Health & DPI Strategist
Expert in designing scalable digital infrastructure for global health.
Drives strategy linking Global Goods with digital public infrastructure (DPI).

Mr. Max Kintisch

Director of Research, Digital Public Goods Alliance
Leads research on open-source digital solutions advancing global health equity.
Focuses on scaling Digital Public Goods to strengthen sustainable health systems.

Ms. Neeraja Reddy Karna

Vice President - Engineering- IntelHealth
Strategic Technology Executive
Driving Innovation & Product Delivery
Building innovative last-mile healthcare solutions
