Daily average reported from 22 February to 1 March 2022 (compared to the week prior)

- **23,110** new community cases (18,538) ↑ 25%
- **42** deaths (31) ↑ 36%
- **16,897** people recovered (13,744) ↑ 23%
- **264,440** vaccinations (237,814) ↑ 11%

### Main messages

- Increasing widespread community transmission evident across Thailand
- RTG encourages COVID-free settings and booster vaccinations
- Get vaccinated, maintain universal precautions and stay informed

Situation Analysis

The average number of new community-acquired COVID-19 cases reported per day increased by 25% in the past 7 days compared to the previous week. Although daily reported case numbers continue to increase, Thailand is still not seeing the steep rise seen in other countries due to the omicron COVID-19 variant. The total number of cases reported on 26 February 2022 (25,615), was the highest ever reported in Thailand.

Bangkok continues to report the highest daily number of COVID cases, although the average number of new COVID-19 cases reported per day for Bangkok in the past week (3,022) is not very different from the week prior (3012).

The average daily number of all currently ‘active’ COVID-19 cases (204,164) over the last seven days increased by 27% compared to the previous week. The number of active cases reported today (218,784) is the highest ever reported in Thailand. However, because a greater proportion of patients are now being monitored in hospitals, community isolation and home isolation, the number of COVID cases occupying hospital beds reported today (77,444) is lower than the number in hospital at the peak of the delta wave - that occurred on 26 July, 2021, (96,038). This is also a reflection of the reduced levels of serious illness caused by the omicron strain, i.e. relatively fewer people need hospital admission.

An average of 42 daily deaths were reported in the past week, compared to 31 for the previous week.

The average daily number of severe COVID-19 cases over the past seven days (974) represents a 24% increase over the average number reported for the previous week (783). The average daily number of ventilated COVID-19 cases over the past seven days (271) represents a 39% increase over the average number reported for the previous week (195).

The rise in new COVID-19 case numbers continues to cause a significant increase in the number of severe and ventilated cases in hospitals in Thailand, although the number of seriously ill COVID-19 cases remains much lower than the numbers seen in July / August 2021. There is still currently capacity in the healthcare system to admit patients.

Although Thailand is not experiencing a very big upsurge of COVID-19 cases as seen in some other countries, the widespread use of rapid antigen tests (including those available ‘over the counter that may not be reported) make it difficult to accurately monitor the situation.

Rising COVID-19 vaccination rates in Thailand continue to significantly reduce levels of severe illness and deaths caused by circulating COVID-19 strains. High vaccination rates also help to reduce the transmission of COVID-19. However, vaccination rates are still low in some provinces and some important risk groups.
Global COVID-19 (total) cases, deaths and vaccinations to date:
chart showing cases reported per week (1 March 2022)

435,626,514 confirmed cases
1,200,287 new cases in last 24 hours

5,952,215 deaths
7,082 new deaths in last 24 hours

10,585,766,316 vaccine doses administered
4,904,935,610 persons vaccinated with at least one dose
4,327,599,641 persons fully vaccinated

South-East Asia region (to the week to 28 February)
16% decrease in new cases
18% decrease in new deaths

Situation by WHO Region

Europe
178,744,039 confirmed

Americas
147,176,940 confirmed

South-East Asia
55,793,967 confirmed

Western Pacific
24,385,486 confirmed

Eastern Mediterranean
21,190,981 confirmed

Africa
8,334,337 confirmed

National Situation
Nationally, the number of new COVID-19 community cases has continued to increase by 24% as compared to the previous week.
Daily reported COVID-19 deaths in Thailand since April 2021

Deaths have increased by 36% in the last week.
Daily severe COVID-19 cases

Severe cases
Current count: 1,094
7 days average: 974
7 days increase: 24%*

Severe & ventilated cases have been significantly increasing from past week.

COVID-19 Update 02/03/2022
Hospital bed occupancy continues to rise sharply, a trend commencing at the beginning of February.

Nationally current hospital bed occupancy is increasing from 40 to 59% of available capacity.

Severe cases have also started to increase in the past week after a period of stable daily counts.

NB – these numbers do not include people in hospitals or those undergoing community or home isolation.
Provincial situation
Daily cases in Bangkok have increased from 408 on 1 January to 3,053 on 2 March.

Source MoPH
New COVID-19 cases per million population by province

- There is a wide variation in the average rate of new cases ranging from 23 to 1,401 cases per million population. Most provinces with a high rate were in the Central Region.

- The pattern of average new cases per million population per province remains similar to the previous week.

- The highest average rate of new cases continues to be reported in Phuket, with 1,401 cases per million population.

- A lower rates of cases per million population (100 cases per million or less) were reported in north and northeast provinces of Thailand.
The average rate of deaths per million population ranged from 0 to 3.1 deaths per million population across the 77 provinces in Thailand. Thirteen out of seventy-seven provinces (17%) reported no new deaths in the week.

Krabi reported the highest weekly average rate of deaths per million population in the past week.

Mae Hong Song in the north as well as provinces around Bangkok, and similarly provinces around Phuket in the south, report high levels of per capita deaths.
COVID-19 Testing
Variation in ‘Test Positivity Rate’ over time*

- Nationally test positivity has been steadily increasing in the last week and is now at 29.5%

*The Test Positivity Rate (TPR) is the percentage of all PCR tests conducted in a day that return a positive result.
PCR Confirmed Community Acquired Cases and Antigen Test Kit (ATK) Positive Cases

- The proportion of ATK probable cases compared to the daily PCR confirmed case count continues a steadily increasing trend
COVID-19 burden on vulnerable population groups
Vaccination
People who have received:
1\textsuperscript{st} dose: 53,578,024
2\textsuperscript{nd} dose: 49,739,006
3\textsuperscript{rd} dose: 20,492,825
Vaccination coverage among high-risk groups & adolescents (1\textsuperscript{st} dose, 2\textsuperscript{nd} dose, 3\textsuperscript{rd} dose)

- Vaccination coverage among elderly aged 60 years and above is less than 70% of target population.
- Only 23.6% of them received booster dose.

To 27 Feb 2022

Second dose coverage per million population by province

- The number of provinces reporting higher two-dose vaccination coverage has increased compared to the previous week.

- Two-dose vaccination coverage varies from over 449,098 2nd doses per million population to 1,049,437 million doses per million population.

- The highest rate of vaccination coverage rates in Bangkok, Phuket, Ranong, and Rayong.

- The lowest vaccination coverage rates remain mainly in the western border of Thailand in the provinces of Mae Hong Song, and Tak together with Pattani, Yala and Narathiwat in the far south.

- *Dose 4: For Healthcare Workers + Frontline workers and the general population who live in 10 pilot provinces for tourism*
- **AZ +AZ+AZ** is offered as alternative option. Please be aware that AZ+AZ+PF might offer stronger immune response. Six months Interval between dose 2-dose 3 will generate higher neutralizing antibody level than 3 months interval
- Moderna vaccine can be offered as the booster dose to all vaccine regimens recommended above.

</table>
Entry Scheme into Thailand through TEST AND GO
(Revised measures effective from 1 March 2022)

As of 27 February 2022

ELIGIBILITY
Fully vaccinated* travelers from all countries / territories
*Only vaccines registered by the Food and Drug Administration of Thailand or approved by the Ministry of Public Health or the WHO and received at least 14 days prior to departure

REQUIRED DOCUMENTS
1. Passport
2. Certificate of Vaccination
   - Aged 12-17 may be vaccinated with only 1 dose of vaccination
   - Unvaccinated children aged under 8 must register and travel with their parent or legal guardian
3. Paid SHA Extra / AQ Hotel booking confirmation for 1 day including the fee for 1 RT-PCR test, 1 ATK self-test kit and airport transfer
4. Insurance with minimum coverage of 20,000 USD for medical expenses (not required for Thai nationals and foreign nationals who have Thai social security / confirmation letters from employer in Thailand)

STEPS
1. Register on Thailand Pass (processing time is 3 to 7 days)
2. Prior to departure, obtain RT-PCR test result issued within 72 hours before departure (if tested positive, a medical certificate indicating that your first date of infection is at least 14 days but no more than 90 days before your date of departure is required)
3. Upon arrival in Thailand, pass through designated checkpoints before proceeding to your hotel via a sealed-route (airport transfer arranged by hotel)
4. Undertake a RT-PCR test and wait for test result at your hotel
5. Take ATK self-test on Day 5-6 and report the test result as instructed by the Ministry of Public Health

Travelers entering Thailand through the system "Test and Go" since March 1st, 2022

Day 1
Test with RT-PCR and wait for the result at the hotel

Day 5-6
Self-test with ATK and report the result in the Mor-Chana application

For further inquiries, please contact the Department of Consular Affairs (DCA)
Tel. (66) 02-573-8442 (24 hours) or Email: testp@consular.go.th

COVID-19 Update 02/03/2022
Some people diagnosed with COVID-19 infection go on to develop a ‘post-COVID-19’ syndrome, with numerous lingering symptoms. This is called post COVID-19 condition or ‘long COVID’. Symptoms may begin only after recovery from an acute COVID-19 infection or may occur in continuity with initial illness. Symptoms may also fluctuate or relapse over time. Post COVID condition can happen to anyone who has had COVID-19, even if the illness was mild or if they had no initial symptoms.

The 3 most common symptoms include shortness of breath,. brain fog, and fatigue. However, more than 200 symptoms have been reported. Some less commonly reported symptoms include chest pain, trouble speaking, anxiety or depression, muscle aches, fever, loss of smell and loss of taste.

Initial reports indicate that approximately 10–20% of COVID-19 patients experience lingering symptoms for weeks to months following acute COVID-19 infection. However, this is still a relatively new disease. We still need more studies to determine which people develop these longer-term effects and to better understand why the condition occurs.

WHO recommends that patients who have had COVID-19 (both confirmed and suspected) should have access to follow-up care if they have persistent, new or changing symptoms. Care pathways should be multidisciplinary, meaning that they can include primary care providers, specialist rehabilitation professionals, social care workers, psychosocial workers and mental health professionals.

We don’t have any specific treatment yet for long-COVID because we don’t understand why and how it develops. However, if we can better understand the mechanism of the disease, then we may be able to develop targeted therapies.

WHO is working with researchers to address the urgent need to enhance data collection and reporting on post COVID-19 condition. The project, Post-COVID Condition Core Outcomes, will study these patients to establish what needs to be measured to understand and address the condition.

Protect yourself and others from COVID-19:

• Wash your hands frequently with soap and water or alcohol-based hand rub.

• Cover coughs and sneezes with a bent elbow. Wash hands after.

• Avoid touching your eyes, nose & mouth.

• Keep 1m distance away from others.
