

# Coronavirus disease 2019 (COVID-19)

## WHO Thailand Situation Report – 20 April 2020

Data as reported by the Thai Ministry of Public Health

### HIGHLIGHTS

- On the 20<sup>th</sup> of April 2020, 27 new cases of laboratory-confirmed COVID-19 were announced by the Ministry of Public Health of Thailand, bringing the total number of cases to 2,792.
- Of these, more than 71% (1,999) have recovered, about 1.7% (47) have died, and almost 27% (746) are receiving treatment.
- Only one case was identified in a person returning from outside Thailand; likely reflecting restrictions on entry.
- A total of 16 of the new cases are close contacts of previously confirmed cases. Two cases attended crowded places and 8 cases are still under investigation.
- To date, 68 of the total 77 provinces have reported cases. 35 of these 68 provinces have not reported any new cases during the past 14 days. Bangkok has the highest number of cases (1,440), followed by Phuket (192) and Nonthaburi (151).

### UPDATE FROM THE MINISTRY OF PUBLIC HEALTH

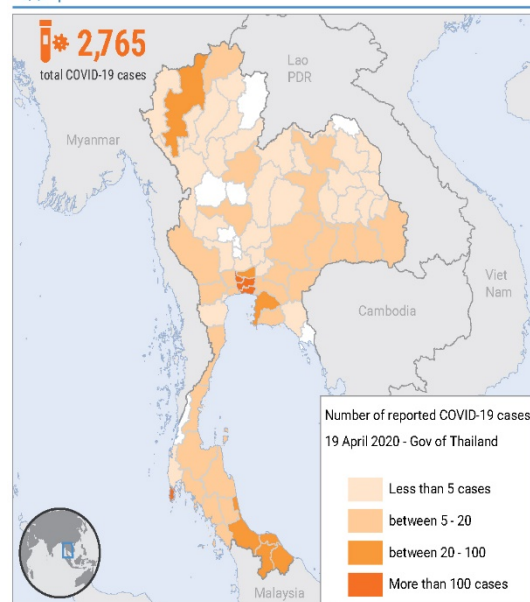

At present, the Ministry of Public Health is focusing efforts on:

- Rapid contact tracing
- Active case finding in groups who have higher risks, including low-skilled labourers.
- Active case finding in areas where transmission is ongoing, such as Bangkok and Phuket
- Strengthening Infection Prevention and Control in health facilities: guidance and standards have been disseminated, including screening / triage of all patients at the point of entry, and managing groups of HCWs to minimize the risk of cross-over infections between teams.

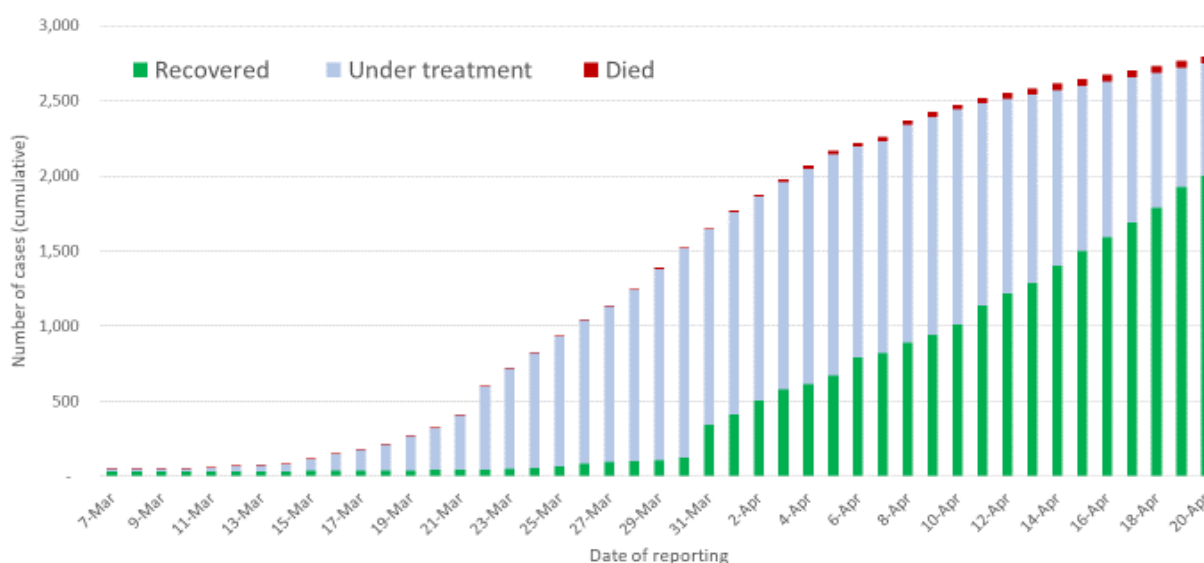

### THAILAND SITUATION in the last 24 hours

2,792 confirmed (27 new)  
47 deaths  
746 people hospitalized  
103 healthcare staff  
1,999 recovered

#### Laboratory testing:

- From February until 17<sup>th</sup> April, 142,589 samples have been tested, the majority through private hospitals.
- From 4<sup>th</sup> – 17<sup>th</sup> April, an average of 3,300 samples were tested per day and the percentage of positive cases varied between 1.41 and 3.82.
- The utility of saliva testing is being explored in order to reduce the risk of infection to healthcare staff in collecting nasopharyngeal swabs. This study is supported by the Ministry of Public Health in collaboration with Ramathibodi Hospital, Chulalongkorn Hospital and Siriraj Hospital.

#### ICU bed capacity

- As of April 17, there are currently 132 intensive care unit beds across Bangkok and vicinity. These beds would be able to provide specialized care, including mechanical ventilation.
- Currently, 82 of these beds are available/unoccupied. Current plans are to increase ICU beds in the Bangkok area to 288 by end-May.

## ADVICE FOR THE PUBLIC

**#COVID19 and disability**

**People with disability are at a greater risk of contracting coronavirus because of:**

-  **Physical barriers to access hygiene facilities**
-  **Need to touch things**
-  **Difficulty in enacting social distancing**
-  **Difficulty accessing information**

**#COVID19 and disability**

**Governments should ensure that people with disability:**

-  **Are not left behind in the coronavirus response**
-  **Still have the right to access the healthcare they need on an equal basis with others**

 **World Health Organization**
