5.1 Introduction

WHO is seeking for a qualified, eligible and competent proposer for the Policy Formulation Study on Developing the Regulatory Framework for Artificial Intelligence (AI) Governance in the Health Sector initiative.

Purpose

The purpose of this activity is to support the Center for Health Resource System Policy (Pusat Kebijakan Sumber Daya Kesehatan) BKPK and relevant stakeholders within the Ministry of Health (MoH) in developing evidence-based national policy recommendations for the governance of Artificial Intelligence (AI) in Indonesia's health sector. The recommendations will be informed by an assessment of the current regulatory and institutional landscape, stakeholder consultations, international benchmarking, and analysis of priority governance gaps and policy options.

The study is intended to provide a clear and actionable policy direction for the safe, ethical, and standardized utilization of AI across Indonesian health sector. These outputs are expected to provide clear and structured recommendations to inform subsequent development or refinement or relevant regulation, Norms, Standards, Procedures, and Criteria (NSPK), and technical guidelines to ensure patient safety and data protection in the digital transformation era.

Background

As part of Pillar 6 of Indonesia's Health System Transformation (Health Technology Transformation), the MoH is accelerating the integration of digital health through the SATUSEHAT platform. Artificial Intelligence (AI) has emerged as a critical tool for medical imaging, clinical decision support systems, and administrative efficiency.

However, despite its potential, several strategic challenges remain:

- **Regulatory Gaps:** Current laws, such as Law No. 17 of 2023 on Health and the PDP Law, provide a broad legal basis but lack specific "end-to-end" governance for the AI lifecycle (from development to post-market surveillance).
- **Technical & Ethical Risks:** The growth of AI use cases is hampered by risks of algorithmic bias, lack of model transparency ("black box"), and fragmentation in data interoperability.
- **Operational Readiness:** There is a lack of standardized clinical validation, audit mechanisms for algorithms, and varying levels of human resource readiness in health informatics.

To address these issues, a comprehensive policy study is required to harmonize national standards with global ethical principles (WHO, OECD, UNESCO) while remaining applicable to the Indonesian context.

Based on the above context, the Ministry of Health, through the Center for Health Resource System Policy (Pusat Kebijakan Sumber Daya Kesehatan), BKPK, proposes a policy formulation study to develop evidence-based recommendations for an AI governance framework in Indonesia's health sector. Through a consultancy process, the study will assess the current regulatory and institutional landscape, identify priority governance gaps and policy options, review relevant international practices, and engage key stakeholders and technical experts through meetings and focused discussions.

The Proposer shall be a Profit or not profit company/entity operating in the field of AI governance, health policy, digital health, health information systems, law and regulation, public health, or related fields.
